Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to main landing gear, upon landing low rotor rpm caused main rotor blades to flex down and sever the tail boom and causing main rotor damage to both blades,

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Had been spraying range pasture in valley of mountainous area. Departed from loading truck in southwest direction into the wind. After departure gaining airspeed and altitude initiated right hand turn to the east, downwind, to survey pasture to be sprayed. Aircraft indicated airspeed decreased and soon after rotor rpm decayed. Slightly lowered collective and ensured throttle was increasing. RPM continued to be low and aircraft began to settle. Held pitch attitude to maintain forward airspeed. Continued attempting to gain forward airspeed and recover rotor rpm. Continued forward momentum to execute a running landing. Hard running landing occurred with aircraft staying upright.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Ensure adequate altitude and airspeed is available to make safe turn downwind preserving indicated airspeed and rotor rpm.
