

Emergency 1720151 LV Airport 5/10/22

Cleared Heliport / Runway as call came in for a fixed wing landing approx 17:17 Steve and I cleared runway then as we were waiting a rotational shows up which I thought was odd the way they came in as they came in like an ^(from the east to west) airplane (due to wind I believe) but I just thought it odd. So as we awaited landing they were approx 4 1/2' off ground when Ems radioed dispatch Airlink safe on ground when Steve & I looked at each and both said no they're not she jumped then gun so to speak and as they (airlink) attempted to touch down the wind gust pushed them sideways slightly & the Pilot managed to keep the rotors from hitting the ambulance and he rotated back to heading east when helicopter went into a cadywompus wobble from the gust (approx 50mph) and down she went hit the ground kinda skid first and rolled over I believe twice and stopped. We pulled up 341, geared up, pulled line line and charged w/ foam for another fire and after no fire we assisted ems, sheriff w/ pt came / extraction

To the best of my knowledge

(JDD 5/19/22
