Departed KPRC for local Practice Flight at 9:05 AM 5/22/2022

My narrative about the flight Sunday March 22, 2022 as follows:

Did my preflight inspection from card while waiting for fuel. Topped off tanks with 100LL and rechecked quick drains. Everything normal. Listened to current ATIS and primed and started engine. Checked and set instruments and waited for oil pressure.

Called ground for taxi instructions for Eastbound departure on local flight. Plan was to return to KPRC in 1 hr. Ground asked if I was ok with takeoff from C4 intersection and I said I was as I had done this on the last flight. Runup was uneventful and normal. Mag check showed 100rpm drop both left and right. Carb heat the same. Waited for landing traffic probably 5-8 minutes and was given clear to takeoff fly straight out.

Mixture set to approx. $\frac{3}{4}$ rich and throttle full. Liftoff at 70 mph and all normal. Trimmed for 500fps climb and checked runway heading. At that time the engine suddenly stopped. I estimate it had been less than a minute since takeoff. Heard prop spinning but no sounds from motor. I immediately pushed nose down and mixture to full rich, then recycled the mags to no effect. Returned mixture to $\frac{3}{4}$ plus rich and decided to find a place to land. Thought about landing on Willow Creek Road but 1-did not have enough altitude to make it and 2-there was traffic on the road so decided to set down parallel to the road in an open field. This required a slow right turn and then level the wings for landing. I held nose off as long as possible but when it set down it hit a large stump, collapsed the nose gear and I flipped upside down. I was conscious the entire time.

I believe that my left shoulder hit either the door or panel. I undid my seatbelt and fell to the roof of the cabin and began to crawl out of the plane but onlookers had arrived and advised me to stay put as paramedics were here.

This is to the best of my knowledge the chronology of the flight.

Thanks

David Frey
