Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft destroyed due to fire and impact caused the airplane to become inverted after landing

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On June 16, 2022 I took off from KEDU, University Airport, in Davis Ca at approximately 11:19am.

I rotated at approximately 60 knots and began a normal climb. A few seconds later I noticed smoke coming out of the instrument panel just below the glare shield. I looked over my left shoulder to gauge my distance from the ground. I determined I did not have enough altitude, 50-100 feet AGL to turn back to the runway or turn East or West. At this point I became aware that my left shin was hurting, looked down, and saw flames hitting my left shin which I move out of the way.

I committed to landing straight ahead with level wings after clearing trees that lined both side of a creek. I opened my pilot side window and door. The engine began to lose power during this time period. I cleared the trees, flared, and I assume the nose gear collapsed and the nose skidded along the ground and eventually the airplane flipped over. I released my seatbelt and exited through the window. Once outside the plane I observed it was on fire inside the cockpit and I ran away from the plane.

After running about 100 yards I called 911. UC Davis dispatch called me a couple minutes later and I requested medical and fire help. Several minutes later the Air Force called to ask about my ELT being activated. I explained the situation.

I waved down several farm workers and they arrived and provided me with ice for my burned shin. Fire trucks and an ambulance arrived as well as the Solano County Sheriff. I estimate that from rotation until landing was between 20-30 seconds and that I reached an altitude of 100-200 feet above ground level. My landing roll was approximately twenty degrees to the right of the alignment of the tomato field furrows. I did not try to use the left rudder because the fire was in that area. I recall that the fire was shooting on my left shin rather than one source of fire emanating in all directions.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I had no indication of a fire or other problem before take off. Engine run up was normal and I waited for approximately 30 seconds after run up and my 360 turn in the run up area for traffic in the pattern doing a touch and go. I taxied into position and held until the touch and go traffic was on the upwind leg. I advanced the throttle to bottom of the green arc on the MP per normal and the engine reached 26 inches of MP as normal during the takeoff roll. I rotated at approximately 60 knots prior to the wind sock which is my planned abort point.

I had 6 quarts of oil on board and 20 gallons of fuel.

I am at a complete loss of anything that I missed or could have done differently prior to takeoff.

In the few seconds after clearing the trees by approximately ten feet I could have pulled the mixture and turned off the fuel.

After opening the door and opening the window I could have retracted the gear.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The engine started to lose power in the climb after smoke and fire were present.

Other Services, if Any, Prior to Departure

I had the oxygen system charged prior to takeoff. I supervised the process and visually checked the gauge inside the airplane and it was below the max point and still in the green arc.

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

I exited the aircraft through the pilot side window which was open. The arm, which normally prevents the window from opening 90 degrees must have broken.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Hours of flight time are estimated in this report as my log book was in the aircraft and was destroyed by fire. I made estimates based upon the records in Foreflight and my knowledge of flights.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
