Subject: New NAP entry for SLC SWS system

Josline, JR and Michael,

I put in a new NAP entry today, **2016-0527**. This NAP entry is a request to establish a new requirement for the number of wind sensors and inputs into the SWS system that is coming to SLC Airport in April 2017. I would assume it would be more cost effective to establish the requirement now rather than wait for the system to be installed, then try to add additional sensors. Please review this NAP entry and let me know what the next steps are to continue moving forward on this request. Thank you.
