Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft made contact with a high tension power line which damaged the windshield and the right wing. The impact on the road caused the gear to tear off and the nose gear to collapse to the right. The left wing made contact with the ground first which caused most of the damage to the right side of the airplane. The fuselage and both wings are damaged the rear stabilizer and elevators seem to be okay. the antennas were all torn off. The right flaperion arched with the powerline so there is some burn damage on the flaperion. The prop did make contact with the ground which chipped the tip of one of the three prop blades. The only property damage was the powerline but I am unsure of the extent of the damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We departed from KTIW, before departure I did my usual walkaround and preflight inspection. I added just a little bit of oil just to keep it topped off to the desired line where the builder had recommended. We then started the aircraft to taxi over to the fuel station to fill up, we filled the airplane with just under 10 gallons of fuel; it was indeed topped off and full. Then we got back into the aircraft where we got the AWOS from KTIW. We then made the call and taxied to Runway 35. While holding short, I ran my usual checks making sure oil pressure, CHT temps and oil temps were within range and ran a magneto check. After we made the call and departed from KTIW where we had a normal take off. We flew north did not make the turn to come inland until we were clear of the overlying class B shelves that existed to our east. The flight overall was very uneventful nothing out of the ordinary occurred. As we made our turn towards KPAE we tuned into the KPAE AWOS and got the weather then tuned back to the CTAF frequency which I was monitoring. I had noticed that there was a little more traffic than usual hence I made the decision to not perform a straight in approach, I flew more east to join the proper right downwind traffic pattern as per KPAE after hours procedures for Runway 34L. Upon being about 6-7Nm from KPAE I began to make my first radio call to maneuver for the 45 right downwind and began my descent down to the traffic pattern at 1600ft. Within moments of beginning my descent the engine completely cutoff the propeller had come to a complete stop so I immediately began troubleshooting. I first began by switching on the auxilliary fuel pump to the ON position and the carb heat into the ON position and hit the starter button with no luck in starting. Then I cycled the power switch and attempted a restart again with no luck leaving the pump in the ON position. I then tried to pitch down to possibly increase the airspeed to attempt to windmill the prop with no luck. As we came close to 1000ft I made the decision to make an off airport landing which I turned the fuel and power all OFF. I decided that Interstate 5 had too many vehicles on it and the darker areas on the ground were likely populated and heavily forested so I decided I would shoot for a well lit road which seemed to be clear from what we could see. I initiated a glide down towards the road which was clear at the time, as we got down near the road we noticed trees to our left and an intersection up ahead so I was attempting to land before the intersection where there were traffic lights and posts. Moments before coming to the ground we could not see a high tension powerline and there was no time to correct and no engine it was not possible to maneuver out of the way of the powerlines. We collided with the powerlines which caused a large flash and everything after was a little blur as we had hit the powerline and immediately collided with the road after.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

My best safety recommendation for this type of scenario is to know your surroundings. Obviously, there is no way to know every single powerline and obstacle in a situation like this. And with the skies quickly getting darker it make it nearly impossible to see what exactly was on the ground but knowing what road may lay around and how they are composed may be very helpful in a situation like this. From was was going through my head, I made an attempt to not cause injury or loss of life on the ground especially when it comes to bystanders or people sleeping in their homes. It would not be fair for me to make a selfish decision to take someone with us when they were not involved. But overall, knowing what major roads that would not be busy and occupied and as little obstructions as possible would make best for an off airport landing. Being aware I think can absolutely save your life and others lives, unknowing and unassuming can definitely be hazardous in situations like this.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

From what I could tell only the engine failed as there was nothing in the moment I could identify that had failed.
The engine monitoring system was still in fact on and lights were functional.
