Propeller and firewall is bent. Left wing has unrepairable damage, including flight controls. Maintenance for the Aircraft is still under review.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

SP - Student Pilot

CFT - Coast Flight Training and Management, Inc.

The narrative of this incident is based on video documentary of the event obtained by CFT. All information is based on what is observed in the video documentary. All times are based off a 24-hour clock.

July 28, 2022

Lines of evidence:

Approximately 11:56: SP takes off at MYF for local pattern work.

Approximately 12:03: SP conducts first full stop landing on runway 28L MYF.

Approximately 12:10: SP attempts second full stop landing on runway 28L MYF. Aircraft contacts the ground.

Approximately 12:10: SP attempts a go-around (wave-off) procedure.

Approximately 12:10: Aircraft is observed in a nose high attitude with the left wing down.

Approximately 12:10: SP lands the aircraft on Golf Taxiway and taxis aircraft back to CFT parking ramp.

Narrative:

Based on observed video documentation of the event on July 28, 2022, at approximately 12:10 the SP was attempting to perform her second full stop landing on a solo flight event. The video shows the aircraft touching down on the approach end of runway 28L. The approach does not appear to be stable on short final. Upon touch down on runway 28L the aircraft seems to have a propeller strike and a left-wing contact (Impact #1) with the ground which is consistent of the aircraft damage observed after the flight.

Following the second full stop landing attempt and after the aircraft impacting the ground, the aircraft becomes airborne. As the aircraft becomes airborne, the video shows an extreme nose high attitude followed by left wing down banking configuration. The aircraft subsequently turns left towards Golf Taxiway and begins to lose altitude. The SP lands the aircraft on Golf Taxiway. Upon landing the left wing strikes the ground followed by the right wing striking the ground (Impact #2). The damage to the aircraft is consistent with the observed wing strikes. After the aircraft lands on Golf Taxiway, the SP taxis the aircraft back to the CFT parking ramp and shuts down (position #3).

See diagram on the "Additional Information" section.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Prevention:

This incident would have been prevented had the SP identified the unstable approach and executed proper go-around procedures prior to impacting the ground.

Recommendation:

CFT has implemented enhanced go-around training to ensure that students have the knowledge and skill-set necessary to execute go-arounds in all phases of landing.

Additional procedures are implemented to ensure all aircraft adhere to the stabilized approach procedures before committing to landing.
