Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tailrotor damage from ground contact. Drive shaft appears to have broke.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On Monday morning the 15th of August 2022, I departed the Ely Nevada airport in N500AR at approximately 0730. I proceeded 26NM north/northwest of the Ely airport to the wild horse trap. I picked up my first group of horses along the way and proceed to drive them to the trap. At one point along the flight, I needed the horses to turn. I got low and very slow. The goal is to get the horses to turn away from you. The horse chose to turn towards me. I pulled back on the cyclic to prevent them from continuing their turn, which is a normal maneuver, except, this time I misjudged my height above the ground. The tailrotor struck the ground and immediately started to yaw to the right. There was a loud grinding sound coming from the rear of the aircraft. When I noticed that adding left pedal was completely ineffective, I chose to roll the throttle off to slow the turn. I cushioned the landing by adding collective. The aircraft rotated to the right approximately 100 degrees. I was the only occupant of the aircraft, and I received no injuries. I shut the engine down exited the aircraft. I noticed the damage to the tailrotor and I noticed while the main rotor continued to spoil down, the tail rotor wasn't spinning. This happened at approximately 0815 pacific time. Total flight time was .8 hours. The aircraft total time is 5248.9 hours. I collected my thoughts and called my POI who then referred me to the ROC.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Minimum safe AGL altitudes are being readdressed. We will hold a safety class addressing situational awareness of AGL altitude and low altitude decelerations. Pilot has been removed from flying status for 2 weeks and will present a class to company check airman.
