Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing strut has a 10 degree bend. Empennage is crimped at the vertical stabilizer.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departure: KSDL at 0620 (I stayed in the pattern and did one landing and taxi back).

Departed KSDL for A39 at approximately 0630.

I entered a R base for 22 (dirt) and did one full stop landing then took off and flew a right pattern for 22.

I just touched down on the mains on runway 22 and was lowering the tail. My airspeed was approximately 15-20 knots at the most.

There was a 70 degree, 9-12 knot cross wind from the south.

A gust of wind lifted my left wing and I stepped on the brakes too firmly before the tail was completely down and the plane flipped over on its top before I could get the tail completely down. I skidded an additional three feet. I turned off the fuel and the master and climbed out the window. We were able to put the plane back on the mains and towed it to the tarmac where it is currently tied town.

RECOMMENDATION (How could this accident/incident have been prevented?)															
Operator/Owner Safety Recommendation I should have been more cognizant of the L cross wind and definitely should have lowered the tail more quickly before hitting the brakes. My speeds in the pattern, on final and touchdown were correct and I was on the "centerline." The issue was braking too firmly before lowering the tail.
