Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Airstrip fence, trail trees, Airplane wings, Airplane prop, Landing gear, rear windows.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight school ^{manager} scheduled a discovery flight at noon with a former pilot. The manager requested "please go up with Matt, he has his airstrip close by he wanted to go to & do what he wants too". Pre-flighted the airplane around 11:15 am. Taxied to gas tanks @ 103 (Lodi). Re-fueled Airplane to full tanks (26 gallons). Did Aircraft run up on ground. Runup check good. Before takeoff asked client the location of airstrip but he said he knows how to get there not really certain about the directions. Taxied from run-up area to runway for right downwind departure to east. At approx. noon, we takeoff & do the departure procedure. 15-20 minutes later we are at his airstrip, we flew by & over his airstrip. Later when heading out, client intended if we could land there. As per the school instructions, I said yes. So, we circled back around, made the landing on airstrip facing west. Winds at the airstrip are calm. So, after landing west, I taxied all the way to the other end of runway (east departure) & prepared for takeoff. I deployed 10° flaps, holded brakes, made sure all my engine gauges are in green while I have advanced throttle to full. Oil pressure gauge was barely within green arc which I made school aware the last time I flew aircraft. According to them, it was fixed. And no, I was not shown the logbooks for the work done. I was told it was a faulty gauge which has be replaced with the similar gauge. After I released the brakes, as aircraft advances forward, I have no airspeed on digital & steam gauge. I did my scan of looking outside & back inside to check on airspeed. About one half the length of runway, I still had no airspeed. So I pulled power to idle. That's when airspeed came alive & we were in ground effect. I tried to slow down airplane with brakes but since we were in ground effect, I did not had braking. I maneuver the airplane with the rudder so we do not hit the trees head on, which I was successful in doing. we still ended up in trees but none of us was injured. we walked out of wreckage with minimum to none injuries. Time approx 12:27 pm. The intended destination was back to 103 (Lodi) after the flight.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The ways I think this could have prevented are:-

- ① Not landing at airport / airstrip which I am not sure about.
- ② Make sure to check the airplane logbooks to make sure the work have been done & recorded.
- ③ My scanning technique works but it should have been little more faster to be more effective at the time.
- ④ I would have made clear what school wants me to do in that specific flight. For example. If the school wanted me to land at private strips or airports on discovery flight.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Aircraft did not perform as it should. At the time of takeoff, no airspeed was detected. Once, retarded the power to idle to abort takeoff, Airspeed came alive & airplane went in ground effect. At that time, I did not had brakes (for full breaking) & neither was I fully airborne in order to prevent accident.
