Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage-Landing gear/tail boom/fuselage all damaged. Post crash fire.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

0645 - Met with student to go over flight, weather, performance and performed preflight in hangar

0715 - Fuel service completed, performed walkaround of aircraft

0730 - Departed KFFZ for practice area located 4 miles north of KFFZ. Knowing the winds from the ATIS, we flew to the practice area and performed a normal approach to hover to the spot used for practice. Winds at practice site were agreeing with the current ATIS. In the hover, aircraft was checked to operating in the green and normal, I stated we would do straight-in autorotations performed by the student. Student completed those to standards. We moved on to right 180 autorotations. Student performed right 180 autorotations to standards. In the hover, we then discussed doing left 180 autorotations. I took full control of the aircraft to demonstrate one. I set the aircraft up on a downwind heading at 1900' AGL, 70 knots and entered the maneuver abeam the landing spot. The initial glide and start of the turn were normal. At the 90 degree point, I stated the rotor RPM was increasing so I slightly raised the collective to prevent an overspeed. As I continued my scan back outside I noticed we were lower than normal for this position in the turn. I applied right cyclic to level the bank and aft cyclic attempting to slow the rate of closure and rate of descent. I also raised the collective to cushion the landing as much as possible. The aircraft impacted the ground and began to skid. Once the aircraft stopped moving, I called to my student to check his status. He replied he was ok and that he could egress. Not hearing the rotor blades spinning, I called to exit the aircraft and move to a safe distance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Earlier recognition of aircraft position/altitude during turning autorotations.
