Hope you guys had a great flight

11:28 PM

An update of what happened here:
I taped the joints and put 2 rivets to
fixate the alu cover

11:29 PM

Result: I overheated 3 degrees at takeoff (123C) but it was a long taxi and OAT 37C

11:31 PM

I tested around the field but had to fly at 500ft quite long to cool down from 119C it wanted to stay there but at least not red

11:32 PM

During the flight north (10500 FT 12C coolant was 79C pretty constant

11:33 PM

When I circled down from 8000 to pattern altitude at 7% power the temperature gave a low alert!! 47 degrees coolant

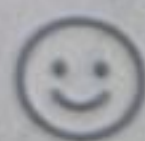

11:34 PM

Haha so we know the radiator works

11:35 PM

OAT was 7C
