...

Perma river crossing. Poles on the North side of the river are 50 foot class 3 poles. This is a two pole structure in an "H" configuration. (47.36, -114.546 Lat, Long) South side of the river are 55 foot class 3 poles. Again, a two pole structure in an "H" configuration. (47.357, -114.547 Lat, Long). Lineal span across the river is 1026 feet. The wire size is designated D6A concentric wound copper for the phase and neutral span.

This is all the information I have available in mapping. [REDACTED] may have files from the drone flight he did at the crossing.
