Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Had FBO top of airplane at KRYN. Did preflight inspection, Checked fuel, and confirmed 100LL

Departed KRYN at approximately 12:00 MST enroute to KCVN

Requested and received Flight Following from Tucson Approach at 17,500 ft.

Descended to 6300 feet at ZAZPY intersection.

AWOS reported winds light and variable when I was 12 miles out.

At HISA I put the gear down and started descent into KCVN

I was flying a VFR Approach to Runway 04 at KCVN

I was in landing configuration with Gear down, full flaps, and approximately 85-90 knots approach speed.

As I prepared to land a major wind gust came across and I made the decision to do a go around.

I applied full power, pulled up the gear, retracted the flaps, and started a climb. At some point the stall shaker started shaking. I put the nose down to keep from stalling. When stabilized, i could see I was too low and just needed to land the plane in the grass infield and maintain control. I landed in the grass, (Landing was smooth, with no noticeable impact), cut off power, and we exited the plane. The grass had caught fire, so we just stayed away until emergency crews arrived and put out grass fire. After exiting, I noticed the right stabilizer appears to have caught a taxiway sign and broke the stabilizer off.

Afterwards, there were numerous reports of wind going from calm to strong, instantly in the vicinity at approximately 4:00. Speculation that it was wind shear or microburst?
