Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

The right wing is completely broken, and the left wing is damaged with various dents and rips. The right fuel tank is ruptured, and the left tank may be damaged. The fuselage is dented in at least one place – right side near engine. The propeller (composite) has about 3" sheared off one blade. The tailplane is fractured in at least one place, and the elevator is damaged. Landing gear damage is unknown. The engine was still running after the crash.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Scout N615DD Accident Report November 11, 2022

At approximately 13:45 I departed Scottsdale Airport (KSDL) in Scout N615DD. At the time, the winds were light and variable, the temperature was in the high 60s(F), visibility was unlimited, and the sky was clear. The fuel tanks were full (70 gallons) and I was the only person on board. After departing runway 03, I turned north and climbed to 3,500 ft., heading for Red Creek airstrip. Red Creek is a backcountry airstrip located about 40 miles north of SDL along the Verde River.

I made four landings to the west at this strip, which is at 2400' elevation and about 1,200 ft long. From there I proceeded north-northeast about 3.5 miles to Banana Strip, another backcountry strip. This strip is about 800' long, 2400' elevation, and is oriented NW /SE. The strip is unimproved dirt, curved, and has a slight upslope to the NW. The temperature as indicated on the MFD was 68 deg F, and the winds were estimated to be very light (<3 mph) out of the north.

I made three practice approaches to the NW, and on the fourth approach landed successfully in about 300-400 feet. I then taxied to the NW end of the strip and discovered that the last 200' of the strip was unusable due to brush obstructions. I lined the aircraft to the SE, configured the aircraft for short field take off, ran the engine up to full power, and started the take off roll. Upon reaching the end of the runway I pulled the stick back. The aircraft, not having sufficient speed to fly, lifted slightly, then settled back to the ground. The plane continued off the end of the strip, crashing through the brush and small trees, eventually hitting a large Saguaro cactus with the right wing. The plane spun to the right and came to rest in a brush-filled gully, about 150' off the end of the strip. The crash happened at approximately 15:00.

The engine was still running, and fuel was pouring out of the right fuel tank. I pulled the mixture, turned off the mags and master, and turned the main fuel valve off. The door was jammed, so I exited the plane through the left cockpit window. When the fuel stopped flowing out of the ruptured tank, I reentered the cockpit, activated the ELT, and transmitted my emergency on 121.5. A passing Southwest Airlines jet received the call and relayed it to air traffic control.

At approximately 17:00 I was rescued by the Maricopa County Sheriff's helicopter and returned to Scottsdale airport.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1) CAREFULLY ASSESS THE USEABLE LENGTH OF BACKCOUNTRY AIRSTRIPS

2) BE FULLY AWARE OF THE T.O. PERFORMANCE OF THE AIRCRAFT FOR THE CURRENT ENVIRONMENTAL CONDITIONS
