

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsb.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings separated from forward attach points and bent rearward. R wing missing several feet of wing tip. L wing has large impact damage along inboard leading edge. Both doors crushed, L door pushed into cabin. Cowling appears separated from fuselage. R landing gear strut sheered off at attach point. Fuselage perforated in multiple locations. Nose gear bent rearward. See photos.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My son and I had decided to participate as volunteer pilots in the Navajo Nation Christmas Airlift. Volunteers fly donations from their home airport to Gallup, NM KGUP. I did my preflight planning and WX analysis using Foreflight on my IPAD. The route from KDVT to KGUP was 196NM and estimated to take two hours of flight time based on winds aloft. The plan was to fly non-stop to Gallup, drop off the donations, refuel the Cessna 150 with a few gallons, fly to Holbrook and top off both aircraft with fuel (fuel was cheaper in Holbrook than Gallup), then return to DVT. I left my house with my son, Carson around 9:50AM for the airport. We arrived at Deer Valley Airport (KDVT) around 10:10AM. We drove to the hangar of the event coordinator for the Navajo Nation Christmas Airlift where we picked up 6 white trash bags of donated clothing and discussed how perfect the weather conditions were across the entire route of flight. We drove to our hangars where we conducted our pre-flights and loaded our aircraft. I own two aircraft, a Cessna 150 and a Bellanca Citabria hangered in two small T-hangars located side by side. I dipped the fuel tanks and found 9 gallons in the left tank and 10 gallons in the right tank of 31J. I checked oil and found 4 quarts in the sump, I added an additional ½ quart in the sump and placed 2 quarts of Aeroshell 100W in the cargo section of the 150, one for me and one for the Citabria. I placed four of the donated clothing trash bags weighing approximately a total of 60 pounds in the cargo area of the 150. Carson placed the two remaining bags in the back of the Citabria. I found nothing out of the ordinary during the preflight of 31J.

At approximately 1800Z (1100L) I started the engine of the 150 and then conducted a run-up in an open area of the ramp. I noted nothing out of the ordinary during the run-up checks. I was cleared to taxi to Runway 7R and eventually cleared for takeoff with a northeast departure at 1815Z (1115L). Carson took off in the Citabria right after me and we flew a loose formation exiting the Phoenix area to the northeast. We gradually climbed to 7,200ft MSL using a discrete frequency to communicate between the two aircraft. I did not pick up flight following because I was flying with another aircraft which allowed for mutual support. The airplane performed as normal at 2500RPM, oil pressure was normal, oil temperature was normal for a 40F OAT, CHTs were normal. We passed abeam of Payson (KPN) at 1849Z (1149L).

At this point we were approaching the Mogollon Rim which sits at 7,500ft MSL elevation. Carson was flying about a mile ahead of me. We decided to start climbing again. We crossed the rim of the Mogollon at 8,500ft around 1900Z (1200L) with plans to continue to climb to 9,500ft. At 1905Z (1205L) I decided to increase the cabin heat because OAT was 40F. The heat knob was already half way out, I pulled it fully out. At that exact same moment the engine stumbled and the tach bounced around from 2200 to 2500 RPM. I immediately pushed the cabin heat knob back to the closed position. The tach continued to drop. I radioed Carson that I was having engine problems and needed a place to land. At the same time I pulled the carburetor heat full out and pushed the mixture and throttle to the fire wall. These actions did not stop the engine from continuing to lose RPMs. Carson said he saw a field near him, he was still in front of me by at least ½ mile. I kept heading towards Carson but I could not see any clearing. The engine was still running but at less than a 1000 RPM. The tall pine trees masked the small meadow Carson had found until I was over the western edge of it. I was too high to attempt a straight landing even with a full on forward slip because of the short length of the meadow. I started a left 360 turn to lose altitude. While I was executing the turn the stall horn began chirping intermittently, the propeller continued to turn. I rolled out level, lined up with the field, and thought I would clear the last few tall pines at the edge of the meadow. As I crossed over the trees I heard and felt a tremendous and violent crack on the left wing. Time was 1906Z (1206L). At that point I just held onto the yoke and tried to brace myself, everything became a blur. After 5 seconds of violence and chaos the plane came to rest upside down. It took me a few minutes to get my orientation and extract my arms and legs until I was laying on the ceiling of the plane. Both doors and door windows were bent and crushed preventing escape. The seats were still in place blocking an exit through the rear window. Most of the forward windshield opening was buried in the dirt but there was a small opening on the bottom right corner of the passenger side. I could see fuel dripping from the right wing root, which had completely separated from the fuselage. The sight of the dripping fuel terrified me and I became frantic to escape the plane. I ended up placing my feet in the opening in the windshield opening and shimmied out of the wreck feet first. I stood up and moved a safe distance from the plane to a small clearing. Besides swelling to the left side of my face I thought I had only pulled some muscles in the left side of my back. Carson was circling over head in the Citabria and I waived to him to let him know I was okay. I had no communications with him because my phone was missing in the wreckage. When I was sure that there was no fire I returned to the airplane and reached my arm into the cockpit through a small opening to turn off the magnetos, and the master switch to prevent possibility of a fire. I could see that the red light on the small ELT control panel was illuminated indicating it had activated. I tried to locate my phone and first aid kit but could not find them. I did find my survival kit which I took and moved back to the clearing. About this time my internal injuries were starting to inhibit my movement. I took the emergency blanket out of the survival kit and wrapped it

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Accident may have had a better outcome if aircraft was at a higher altitude above the terrain at time of engine power loss. Higher AGL may have provided more potential emergency landing locations. Higher AGL would have provided more time to troubleshoot engine issue and potentially restore engine power.

Changing of flight route to overfly less rugged terrain would have increased overall flight time but also lowered risk exposure window when flying over inhospitable terrain.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown, loss of engine power

**Total Time/Cycles
On Part**

6035.5 Hours

Cycles

**Time Since This Part
