Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to Exterior Gear doors, left side of horizontal stabilizer, left wingtip. Crack in hydraulic main gear actuator was identified as the cause of the loss of hydraulic fluid leading to the gear being stuck in transit. (please see report to the FAA from the preliminary mechanic investigation).

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday May 30th 9:35am N9574X departed from S50 (Auburn Municipal Airport) heading to KBFI (Boeing Field). While in the downwind I was completing my landing checklist and the gear did not fully extend and was stuck in transit. I then attempted to put the gear selector back into the gear up position to retract the gear when it did not move, I put the gear selector into the gear down position again and it still did not move. Suspecting a problem in the hydraulic system I attempted to extend my hydraulic flaps and they also did not extend. I knew there was a problem and requested a low approach at Boeing Field and asked the tower controllers to verify that my gear was stuck in transit. They visually verified the issue and I chose to leave the Class D Airspace to have more time to trouble shoot the problem. I went to the NE practice area where we had time space to run the emergency checklist to use the emergency back-up hand pump. When this did not work, I used the Bluetooth headset to call a friend/local A&P at KTIW to help. I was put on speaker phone with another A&P and AI who walked me through multiple different options to trouble shoot. I also had the mechanics contact the maintenance shop where our plane went through its annual inspection last month, since they are experts on Cessna 210's. At this time, I decided to fly towards KTIW (Tacoma Narrows) so I could do low approaches and have the 3 mechanics get a better look at the problem. The mechanics let the tower know I was inbound and at 12 miles out I contacted KTIW tower telling them I was inbound and declared an emergency. After a handful of low approaches and pumping the emergency gear hand pump over the course of 1.5 hours the mechanics and myself, as PIC, decided it was time to land and that we had tried everything we could. I came in as low as I could with partial gear extended and no flaps and smoothly touched the runway centerline on the belly of the plane. The front gear was locked in place so I had a little bit of turning ability. As we slowed down the plane began settling and sliding to the left and we came to a stop in the grass just to the left of runway midfield.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☒ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

Hydraulic Gear Failure, as stated in the statement the gear got stuck in transit and the emergency hand pump did not work. The gear would not fully retract or extend. Aircraft went through an extensive prebuy and annual inspection 5/8/2023 8hrs and just a few weeks before the incident.

In preliminary investigation by mechanics crack found in left main hydraulic actuator. (please request further information from Rainier Flight Service A&P IA Clete Johnson)
