Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Civil Air Patrol's (CAP) N844CP (High Wing CT206H) CAP Form 5 Flight was launched 0908 Monday September 16th. Weather was 8,000 AGL overcast, greater than 10 mile visibility, winds calm with temperatures ~ 50F. Total Duration of flight was approximate 40 minutes. Crewmembers included [REDACTED] as PIC and [REDACTED] as Check Pilot. CAP Sortie A0219 was an Annual Currency Flight to maintain [REDACTED] CAP Flying Status, comparable and logged as a GA Biannual. Exercise included stalls, Steep turns concluding with multiple landings at KMEV. Standard Crew Resource Management (CRM) were practiced including "Sterile Cockpit" procedures. Both pilots were rested and in good health. [REDACTED] supporting equipment included an IPAD w/ Foreflight and a Bose AN20 Noise Cancellation Headset

Return trip to KMEV used the RNAV 34 Instrument Approach from the IRPOH IAF – no foggles or hoods were used, [REDACTED] as the Safety Pilot. The missed approach was executed at ~5145' DA with a radio broadcast made to stating intentions of flying the RWY heading, offset to the right, and entering a crosswind to left downwind for RWY 34. KMEV Airport AWOS wind supported the default RWY 34 with no other Aircraft were in the Pattern

A Second RWY 34 landing was a full flap short field concluding with a "Touch & Go" departure. Standard pattern broadcasts were made by the pilot ([REDACTED]). A climbing crosswind to left downwind was in process when we received another aircraft intentions – heard as "Sling entering left 34 downwind on the 45 deg Entry". Both [REDACTED] (Check Pilot) & myself scanned the general 45 deg Entry area - I requested [REDACTED] to verify any ADS-B signatures on the G1000's MFD – no targets noted. [REDACTED] made an additional airport broadcast advising of our aircraft entering left KMEV RWY 34 Downwind while [REDACTED] continued his outside scan looking for traffic.

Impact occurred at approximately 0947 and 5390' during our climbing turn to the Downwind leg adjacent to RWY 16's numbers, - recommended KMEV pattern altitude is 5724' (1,000' AGL). Neither of our crew saw the other aircraft or heard any additional airport traffic advisories. Check Pilot [REDACTED] took the controls, turned off the master switch and pulled mixture having noted serious engine imbalance from loss of one of the three propeller blades. N844CP successfully landed on KMEV's RWY 12. Workload prohibited any "May Day" radio calls were delayed, until after landing.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
