

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Chandler State: AZ

ZIP: 85286 Country: United States

Latitude: N 33 16.1 Longitude: W 111 48.7

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 10/11/2023 Local Time: 10:50 a.m.
mm/dd/yyyy

Time Zone: PDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N4380D

Manufacturer: Piper

Model: Malibu

Serial Number: 46-8508045

Year of Manufacture: 1985

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 4118 lbs

Weight at Time of Accident/Incident: 3320 lbs

Number of Seats: 6 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 4

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal

☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft sustained damage to the propeller and lower engine cowl, left wing, left aileron, left flap, left horizontal stabilizer, left side of elevator and bottom of fuselage. Minor damage was sustained by a fence off airport.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight was unremarkable with 7.5 quarts of oil, no visible fuel at the bottom of either fuel point which is normal due to the expectation of 35 gallons total fuel on board and fuel strain samples clean and clear (light blue avgas). Engine start and taxi was normal. Normal run up was executed with no anomalies noted. Oil pressure, temperature and fuel flow were all normal as I took runway 22R for departure. Takeoff was normal with zero issues. Climb out at 110 knots initially to catch the Cherokee (photo platform airplane for the mission of getting aerial photos of 80D) and then slowed to 100 knots as I approached it. Reduced power during the climb considerably so as to not out-climb or overtake the Cherokee.

About 3 minutes after departure and perhaps 5 miles from the departure end of runway 22R at approximately 2,700' MSL, the engine began to sputter and would not produce power normally. I reversed course to the south and decided that I had enough altitude to return to CHD. I called the tower to declare an emergency, answered the question of souls and fuel on board and was cleared to land on runway 4R. I lowered the landing gear in anticipation of the landing and then began to troubleshoot by turning on the high-pressure fuel pump and switching fuel tanks. There was no change to the sputtering of the engine. The additional drag of the landing gear was enough that I was not sure of making the field so I retracted the landing gear. The resulting reduction of drag made it possible to reach the field. As I committed to landing on the field but short of the runway, I saw a work truck on the airfield perimeter sitting between the two street lights between which I was planning to fly. It appeared that I was low enough that the truck may have been an obstacle so I turned right then left in order to go between the next set of lights. When rolling out of the last turn, I felt a jolt and the airplane rolled hard to the left which I countered with rudder only as I estimated my airspeed was under 80 knots with flaps up. Once I was on the airfield itself, I kept the wings level with significant right rudder and landed gear up in the safety area short of runway 4R. Coming to a stop, I shut off the mixture, mags, lights, fuel pump, radio master and battery switch. We egressed the aircraft via the normal cabin entry door on the left side of the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)
