

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Ririe State: ID
 ZIP: 83443 Country: USA
 Latitude: 43.48488°N Longitude: 111.76102°W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 11/04/2023 Local Time: 14:00
mm/dd/yyyy Time Zone: MDT

Collision with Other Aircraft: ☐ Midair ☒ On-ground ☐ None

AIRCRAFT INFORMATION

Registration Number: N88VJ
 Manufacturer: Skystar
 Model: Kitfox S5
 Serial Number: 001 (59907-0209)
 Year of Manufacture: 2002
 Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: kitfox s5 outback

☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1550 lbs
 Weight at Time of Accident/Incident: 1042 lbs
 Number of Seats: 2 Flight Crew Seats: 1
 Cabin Crew Seats: 1 Passenger Seats: 1
 Number of Engines: 1

Category of Aircraft

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

There was no damage to property or persons other than the aircraft. There was a prop strike which was made of composite materials. The upper and lower cowlings have minor cracks in the fiberglass. The windscreen and canopy are made of plexiglass and beyond repair. The wing struts are bent and beyond repair. The top of the wings reflect there are multiple broken ribs. There is a down tube in the cockpit in front of the windscreen that is bent. The anchor points for the wing struts at the fuselage may have sustained damage will not know until fabric covering is removed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday November 4th at 13:20 I departed Rigby Airport (U56). The purpose of the intended flight was to practice off airport landings. The aircraft is equipped with 26in alaskan bush wheels. We were a flight of 4. Before the flight I was waiting for one of my friends to arrive at the airport and decided to do some touch n go landings at the departure airport. I made 6 trips around the pattern and 6 landings. I was able to make those landings very short from my touchdown point, less than 500 ft to a complete stop. The winds were calm and the cloud layer clear below 12,000 ft and the temperature was mild at 52°. My pattern airspeed is 70 mph, my over the fence speed is 60 mph and I am able to flare at 50 mph and below and my stall speed is 39 mph. The two of us departed Rigby airport at 13:20 MDT each in our own aircraft. We met up with the other two aircraft in our party, each in their own aircraft, making a flight of 4 enroute to our first intended landing zone. One of the airplanes in our party was a super cub with 35 inch bush wheels, he made the first landing at our first intended landing site. I was second, everything went great. The terrain was relatively flat. There was some tall grass, but you could see the ground. There was some sage brush in the area, but nothing extraneous. It was bumpy but that was expected. The third aircraft in our party came in behind us and did just as well, the fourth in our party was breaking in a new cylinder and was just observing from above. After shutting down we walked the ground and discussed our departure from this landing zone which is on a bluff above the Ririe reservoir. We left in the same order as we arrived. The next landing zone was just on the other side of the reservoir about a half mile to the south. The second intended landing zone was much wider and longer than the first and the terrain appeared to be exactly the same but the grass was taller and thicker, and the ground was obscured, this will be where the accident happened. The landing zone is also on a bluff above the Ririe reservoir. We were landing in the same order as we did previously. Super cub touched down with no event. I followed in with the intent of just dragging my wheels. The grass was tall and the ground was obscured. During the flare of my landing everything was going really really well, and I changed my intention at the last minute and decided to make a full stop landing. The ground was a lot rougher than I expected. My landing consisted of a bounce when I hit a couple of rocks that were positioned next to each other with my right main wheel after about 200 ft of roll out. I then quickly retracted my flaps. During the next several hundred feet I'm not quite sure what exactly happened, but my belief is my tail wheel bounced off of another rock which sent the tail airborne again above a 30° angle, I'm guessing, and as I started to see the ground in my windscreen. I was still rolling on my mains and I was fully stick back in my lap and as the aircraft continued to nose over, I believe I was standing on my rudder pedals in the prone position trying to pull back with everything I had, which could have initiated some excessive braking exacerbating the nose over condition. By this time I was probably going less than 20 mph. It was a very slow motion process in the final phase of the nose over. The aircraft came to rest upside down. I extricated myself in a hurry. I grabbed my fire extinguisher and switched off the masters, which was followed by some very curse words. My friend jumped out of his airplane and ran to my aid. My ELT was going off, so I removed the panel and switched it to the off position at the same time my friend was contacting the authorities in order to not have search and rescue be dispatched, since no one was hurt and there was no fire or any other personal property damage other than the airplane. The sheriff's department was dispatched and they were able to locate us and drive directly to our location. At that time they made contact with us they took photos and a statement. One of the officers was able to get the NTSB and the FAA on a group call and I was able to answer their questions to their satisfaction. At that time the officers helped us with their winches in order to get the aircraft back on its wheels carefully and safely, we then folded the wings to prepare it to be removed by myself and a friend with my truck and trailer. Once we were released from the scene, my friend and I dispatched ourselves in his super cub and deposited me back at the Rigby airport where I loaded up my truck and trailer and grabbed a friend and drove the 13 miles out to the location. I was able to load the aircraft on the trailer and get it back to the hangar by 21:00 that same evening.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

First thing is to stick to the original plan of just dragging the landing zone. The second thing is if you can't see the surface of the ground clearly then abort the landing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
