NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. Todd, Paul, Please see below recollection of Mondays flight 11/13/2023 7:00am in my office planning flight to Nampa, check the weather for the route for the entire day, checked weather for possible landing airports should diversion be needed, wrote out each possible diversion airport code, elevation, runways, size, frequency's needed, and ceiling for closest time I could possibly be needing them I did not complete a weight and balance as I know I was way under an need 7:45ish left for COE Arrived at COE pulled N86H out of the hanger put all gear in the airplane cooler with food for a day small bag with clothes, and 3 gallons of deice Called Stan craft for fuel, while waiting for Fuel preformed preflight checked all lights, brakes, flaps, engine oil, props, opened fuel caps for fuel, After fuel was placed in right tank by stan craft I checked that tank was full and secured cap then closed cover Stan craft completed left side and I checked to make sure it was full an replaced cap and cover I then checked fuel for contamination from both the engine ports along with both tank ports fuel was clean fuel was approximately 40 gallon but they just email the office later. Entered airplane, put seat belt on took 5 minutes to refresh on check list, turned on master, mags fuel pumps to prime each engine, cleared prop left engine, started it check oil pressure , then cleared right side and started it, checked oil pressure oil pressures all good so turned on generators Low voltage light stayed on(this is normal at low idle) set 530 to full fuel install Nampa and my destination, monitored awos for weather and current altimeter, 29.95 and ceiling at 6000 light rain wind calm. Engines warmed up so taxied out to run up on runway 2, Preformed run up to 1700 rpm check left mags both were good checked right mags they were also good checked left generator was good then right generator it was also good, checked left vacuum pump it about 7 and right was 6 , feather left prop 2 times and then right prop 2 times Both props preformed proper, backed throttles down to idle, verified all controls were free and operating correctly Reviewed take off checklist and emergency checklist called out taking of cda runway 2 with south departure Pulled out one runway lined up set heading bug held brakes and ran throttle to full , released brakes and began the roll called oil pressure manifold pressure airspeed alive called out airspeed at 80 at began to pull back about 2/3 runway still ahead, the airplane climbed good real good Pressed brakes and raised gear While on climbing down wind shut fuel pumps off 1 at a time and pull props to 2350 the airplane was still climbing fast so I pull throttles back to slow the climb some #2 came down to 18" manifold pressure but #1 was 21" manifold pressure I tried to adjust #1 but it would only adjust up not below 21" manifold pressure I trimmed the airplane to try and determine the cause or if it was a gauge malfunction , engine appeared to be making power pretty even to #2 decided to return to COE as unclear what issue was, made call for extended entry to pattern for 2, pulled throttle back to 15" however #1 remained at 21" worked #1 as set up for landing no change was occurring, set up for landing slowed to 140 and set flap to 15 gear down fuel pumps set to low, work #1 lever more no change minor yaw to the right was able control, prepared to land and prepared to pull mixtures back on touch down to shut it down, so was short final full flaps unlocked door (wasn't sure how to slow down any more) about the fence crossing checked airspeed it was 80 a little slow vassi was white and red pushed props to full instantly the airplane began to turn left I went full rudder aileron stall horn was screaming I knew it was going down didn't want to go upside down so I push the nose down an braced best as possible until nose hit the dirt After the plane stopped I was half in the front half in the back blood everywhere right wrist in major pain right shoulder came pushed					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

still pondering, several options were on the table.

1. could have shut #1 down and tried a single engine landing
2. could have landed long and tried to slow it down in time before the end of the runway
3. could have went around to 6/24 and landed long (did not consider at the time)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Left engine throttle was stuck at 21 inches manifold pressure Confirmed with the airplane yaw and speed
