☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Left and Right wings, firewall forward, body below wings wrinkled wooden sign post

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Had planned to depart S50 and have a scenic pleasure flight around the San Juan Islands, Namely Orcas Island and Friday Harbor. Did not plan to land, just visual, then return to S50. had planned for 2 to 2.5 hrs. had full tank of 100LL from S50 of 16 gallons, which gives around 3.5 hrs flight cruise with reserve.

It was 30 deg F and i preheated the engine with a generator and small heater with hose directing heated air into oil cooler scoop under the prop which directs air over bottom of engine. I had it on about 30 min while i did preflight. Preflight all normal and engine oil was plenty full on dipstick. I always check, wipe off dipstick and insert and check again.

when i started the engine oil temp was approx 50 deg F. It started normally and gauges read normal as other startups. I had a fast idle about 1300 rpm for about 2 minutes as i went over checklist, set altimeter to approx 63 ft MSL, turned the transponder from ON position to ALT.

I taxied from center field parking to south taxiway to the end of runway 34, where i did my runup and final checks. I throttled to 2000 rpm and did mag checks. both mags showed minimal droppage during checks. Well within spec. Final check of gauges, and noted oil temp was right near 100 deg F. CHT and EGT were all normal at this point and I moved to the hold line to take off 34, had a helicopter that was landing so i waited about 1 minute after it moved to avoid wake turbulence.

I radioed Auburn traffic experimental sonex niner two zero taking off runway 34 for in pattern, which is normal for me, I do a downwind where i take off to make sure plane is running well before going out of area.

After calling, I proceeded with smooth full throttle and lined up on centerline and was accelerating smoothly. about 25 mph i push forward on stick and lift the tail, then about 55 mph i start lifting off and go for around 80 mph for takeoff climb, which was all normal.

At around 100 ft AGL engine lost alot of power and i immediately pushed nose forward to keep airspeed and called on radio emergency engine quit and going to land on the street straight ahead of end of runway 34 north end. At this time power came back, i believe i may have pulled throttle back some and then i slowly added more power since it came back, and radioed had power back going to climb. I did a slow climb and knew i could not turn back to runway. Slow climb and slight right turn there is a empty field, just North east of the north end of the runway. As i was climbing i thought i would head for that field and if had enough altitude i could go back to the airport. As i turned from North to East, power surged again, I was probably 150 ft possibly 200. The engine completely quit. I called on the radio I was going down on Auburn Way. I was not high enough to coast to the airport or to the field. The Road was under me and I tried to restart 2 or 3 times as pushing nose down knowing not to stall. No start and being about tops of poles, i pushed down to avoid a powerline and it scraped along the top of my canopy. I had warehouses and light poles on the right and the road straght ahead and below. I went for the road, and as i was getting close i see several cars and a big box truck coming towards me and doing what i could to avoid them and hoping there was no cars below me, i went to the right a little to avoid this truck and cars and heard a big boom and as i looked to my right, i was being thrown 180 deg to the right, the nose pointed straight down and seems like about 5 to 10 feet nose dive it hit the ground, felt like it slid some now to my left and suddenly stopped. i noticed i was not upside down, so i opened the canopy and it fell to the ground, then undid my seatbelt, crawled out left foot to the ground, then right foot, right then a man was behind me helping me and a woman and this man walked with me to the north on the sidewalk area about 50 or 100 ft and sat me down.

there was a rock i sat on then they decided i need to lay down. i heard ambulance and they wouldnt let me move, did thier work and put me in the ambulance. at the hospital had some back muscle strain. did a ct scan and all was clear from hip to neck. was given iv fluids to calm me, and a ekg. was released around 4:30pm

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
