

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Moriarty State: NM

ZIP: 87035 Country: USA

Latitude: 34-58-41.4000N Longitude: 106-00-00.1000W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/15/2024 Local Time: 14:22:23
mm/dd/yyyy

Time Zone: Mountain

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N995J

Manufacturer: Stemme GMBH & CO

Model: S10-VGT

Serial Number: 11-083

Year of Manufacture: 2004

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1874 lbs

Weight at Time of Accident/Incident: 1600 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
☐ Balloon

☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main landing gear broken/collapsed after hitting an obstruction in the field. Right main landing gear failed upward through fuselage top. Tail boom broken in half around mid fuselage. Various panels, gear doors, inlet scoops, etc. torn off. Possible damage to engine carrying steel tube frame inside mid fuselage. Possible damage to wing(s) due to high energy ground loop. These will be determined after aircraft is secured in my hangar.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed OE0 around 1222 Mountain Time for a local soaring flight. Upon return for landing there was an Army Blackhawk helicopter performing patterns and landings to RWY 26 and to RWY 17. I announced my intent to land on RWY 26 and the helo stated that he would give way. I was 3,000' AGL upon arrival and used dive brakes to reduce altitude to 1,000' AGL pattern altitude. Upon entering downwind and reducing speed, I lowered the landing gear and announced "Landing runway 17" as the wind had changed to 180/17G22. The helo announced downwind runway 26. I made another check of the AWOS and the wind had shifted to the west, around 250 degrees so I announced, "Now landing runway 26, midfield downwind" and the helo announced that he would make a low approach and was turning short base to runway 26. I started my base turn and recalled watching a video in which a light plane following a Blackhawk was uncontrollably rolled over by rotor wash and crashed along side of the runway. This was a major distraction in addition to another returning glider announcing that she intended to land to the east on runway 08, opposite direction, and flying through a strong thermal as indicated on my digital flight recording. The height gained from the thermal placed my glider too high to safely complete a landing on runway 26 so I completed a 180 degree left turn with the intent of losing altitude and making another attempt. A look at the altimeter showed me at approximately 400' AGL and I felt that I was too close to the runway in these variable and gusty wind conditions to make a safe 180 turn to land on runway 26. I was approaching runway 18 so I made a right 90 degree turn onto final but that placed me at 400' AGL and over 1,000 feet down the runway. With landing gear, full flaps, dive brakes, and a full slip, I was unable to land until approximately the last 1,000 feet or less remaining. I left the departure end of the runway at approximately 40 kts and entered rough desert terrain. During the roll out, my left main landing gear hit a chuck hole or a grass hummock, breaking the gear leg and launching the glider into the air below flying speed and starting a rotation to the left. When the glider hit, the right main gear pushed up through the fuselage, sticking out the top and, at some point, the left wing tip contacted the ground starting a violent ground loop which broke the fuselage tail boom in half, tore off various doors, panels, etc., and came to rest facing 180 degrees to the direction of flight. The landing occurred at 1422 Mountain Time.

After rolling out on final to RWY 26 and noting the high altitude, I could have immediately made a 180 degree right (instead of left) turn which, given the wind, would have placed me further from runway 26 due to the southerly wind or further away from the threshold of runway 18, either of which would have given me a better chance of landing safely. Some folks have suggested that I could have started the engine as the Stemme is a motor glider. My response to that was that, after 2 hours of cold soaking at below freezing temperatures at altitudes up to 16,000 feet MSL, it is likely that the engine would not have started and, if it did, would not produce power until warming up.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

See Afterthoughts in the previous section.

As a final thought, I could have not descended to land while the helicopter was practicing in the pattern. There was sufficient lift to have stayed aloft for a couple more hours, but I was tired and chose to land.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
