

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft Damage post forced landing following engine failure/ full power loss:

- 1/ Moderate/Major Engine/Propeller/Spinner compartment;
- 2/ Moderate Left/Center Upper Wing damage;
- 3/ Minor Fuselage fabric damage / holes from tree branches;
- 4/ Minor right Elevator fabric damage;
- 5/ Minor left Horizontal Stabilizer fabric damage;
- 6/ Minor lower left wing Aileron control damage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 25th, 2024 I purchased a Freeman Steen Skybolt experimental aircraft, N873X, from Lodi Airport (1O3) Lodi, CA.

On the same date, at approximately 1520 hours, I purchased Av-Fuel from the self- service fuel pump at 1O3, completely filling the main fuel tank. The main fuel tank of this aircraft holds a total of 29 gallons (1 gallon unusable). The aircraft also has an auxiliary fuel tank in the upper wing which holds a total of 9 gallons. The sellers stated they had never used the upper auxiliary fuel tank and I decided I would prefer to have it inspected before utilizing it. The main fuel system on this aircraft is a center tank, the fuel selector valve is: left for auxiliary, center for off, and right for main. When the fuel selector is in the "main" position, there is a safety that prevents it from moving. There is no fuel balancing required between wings on this aircraft.

Based on my fuel calculations, 29 gallons was completely enough fuel to complete the flight safely and have reserve contingency fuel. I estimated the flight would take 1.5 hours total flight time and would be conducted in VMC conditions. I calculated the following:

- Ground Operations - 0.5 gallons
- Climb to 5,500 feet msl (5 mins at 1500 fpm climb - 30 gph fuel rate) .1 flight time - 3 gallons
- Cruise/Decent to SMX airport (23 inches manifold pressure and 2300 RPM) 1.4 hours at 12 gah fuel rate

Based on these calculation - Total fuel burn would be 20.3 gallons. I would land at SMX airport with 8.7 gallons fuel remaining (7.7 gallons usable).

On same date, at approximately 1540 hours, I departed 1O3 airport on runway 22 and departed to the south on a right downwind departure. The climb out was uneventful, leaning the mixture during the climb and reached the cruising altitude within 5 mins. As soon as in cruise, I pulled the power back as planned to 23 inches manifold pressure and 2300 RPM, then leaned the fuel to lean of peak, plus 50 degrees. This gave me a burn rate of 11 gallons per hour, 1 gallon better than planned for. At approximately 1705 I began my decent to landing at Santa Maria airport (KSMX). The flight from 1O3 to KSMX was uneventful.

I conducted my pre-landing checks, turning the boost pump on, mixture full rich, and prop control full forward. I entered left traffic pattern, altitude of 1,261', where I reported left traffic, midfield abeam for Runway 30. KSMX tower cleared me to land on runway 30. As I approached the 30 numbers, I reduced power to 1500 RPM and the aircraft slowed from 160 kts to 110 kts. I decided I wanted to extend a few more miles on the downwind to conduct a stable approach on base and final. As I reduced the power to begin my decent to land, I began a 10-20 degree left base turn. At the moment the engine hiccuped twice and then experienced an immediate engine failure/full power loss. I immediately attempted a windmill restart, confirming fuel selector was on the main fuel tank, boost pump on, mixture full rich, and propeller was full forward. I then checked for response form the throttle moving to the full open position and back several times with no change/response. (continued below)

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown origin of engine failure.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine failure / full power loss.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

At this time, I declared an engine failure to KSMX tower and would be attempting an off site forced landing. I estimate my altitude to be 900 feet agl. I immediately determined I could not make the airfield from by current location and the current wind conditions. I pitched the aircraft for best glide. I noticed the aircraft was descending rapidly. I was currently over a largely populated area. I assessed two roadways, but determined the holiday traffic was too heavy to safely land. I then choose a field which was located approximately 90 degrees to the west to conduct the forced landing. As I was approaching the field at approximately 300 feet agl, I then noticed rising terrain, in the direction I was committed to landing. I did not believe I could successfully land without being seriously injured. I then decided to lower my angle of attack, gaining airspeed, then climb over the rising terrain. Doing this, I was able to clear the terrain; however, there were high tension power lines in my direct line of site and aircraft trajectory. I estimate my airspeed after the climb was 70-80 kts. In a last ditch effort not to collide directly into the power lines, I pulled the nose up. I was able to clear the propeller and main landing wheels from the power lines; however, the tail wheel hooked on to one the lines. This caused the aircraft to decelerate rapidly and pitch the nose of the aircraft down approximately 70-80 degrees. At that point, the rear tail wheel spun free of the power line, sending the aircraft on a trajectory down through a large tree, again slowing the aircraft down more and the final impact on its nose/engine compartment on a private gravel road located on Marcum St, Orcutt, CA. The aircraft then flipped upside down landing on its upper wing, and tail. The last bit of energy the aircraft had, caused it to rotate upside down approximately 180 degrees to the right coming to a stop facing Westerly direction. Approximate lat/long of this incident is 34.51.38N / 120.27.03W.

Once the aircraft came to a full stop, I was left hangin upside down in my five piece harness. I assessed for any major injuries, finding none. I then self extricated from the aircraft. Once out of aircraft, I could see oil and fuel leaking from the engine compartment. I reentered the cockpit to secure the aircraft and prevent a post accident fire. I turned the boost pump, avionics, battery master switch, magnetos, and fuel selector switch all to the off position.

Santa Barbara County Fire Department responded, along with other fire agencies and local law enforcement. There was a post incident grass fire, caused from sparks from the power line collision, which the fire department was able to contain quickly, with no property damaged, threatened, or persons injured.

NTSB Inspector Eleazar Nepomuceno, contacted me via my cell phone while at the scene. I gave a preliminary statement to the facts which had just occurred. Inspector Nepomuceno granted me permission to remove and secure the aircraft. He instructed me not do any mechanical work to the aircraft. He also instructed me to look for evidence of fuel remaining.

At approximately 2015 hours, same date, I was able to upright and secure a tow company to remove the aircraft via a flat bed tow truck. The aircraft was delivered to my personal hanger at around 2230 hours at KSMX airport. Once that aircraft was upright and secured my hanger, it was determined that the aircraft main fuel tank had approximately 2 to 3 gallons of fuel remaining. I reported this to Inspector Nepomuceno the next day via text message with a photo of the fuel site gauge.

The aircraft is located and secure at KSMX hangers, 3105 Airpark Dr - Hanger A.

These are the facts to this incident to the best of my recollection.
