Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> 1. Tail rotor blade(s) sustained damage to tips requiring blade replacement 2. Power line was severed.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i> Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. I had reconnaissanced this field from the air prior to this flight. I had also reconnaissanced the area from the ground prior. At the time of the incident I was drying a cherry orchard with this helicopter after a rain shower, I had been airborne for approximately 30 minutes. I was flying approximately 30 feet above the ground and less than 20mph while doing this work. At the momemt of the incident I was working parallel to power lines on my right side. When I was turning at the end of the field the tail rotor blades made contact with a power line causing the line to be severed. I witnessed a spark of the powerline being contacted and felt a tailrotor imbalance so I landed immediately. The severed power line settled to the ground without incident or injury to anyone, and I landed the aircraft without further incident. The terrain was relatively flat with rows of 10' high cherry trees in the immediate area. There was no wreckage. Power company crews repaired the powerline within approximately 90 minutes. Departure time was 6 pm local, from an orchard located off of W Acord Rd in Benton, WA. No services were obtained. The intended destination was the departure point.		

RECOMMENDATION (How could this accident/incident have been prevented?)		
Operator/Owner Safety Recommendation Training emphasizing the following: 1. Pilot must maintain further horizontal and vertical separation from obstacles while drying cherries. Minimum distance of 1 rotor diameter from any part of the aircraft to an obstacle is suggested at all times during this type of operation 2. Obstacle separation must be guaranteed by pilot observation at all times. Do not fly if separation cannot be guaranteed. 3. Pilots must continue to reconnaissance fields from the air and the ground prior to cherry drying operations with the aircraft.
