Nose gear collapse, propeller strike

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On June 1, 2024 around 11:15 am, N1259M departed Reid-Hillview (RHV) for Hollister (CVH) with 1 pilot and 2 passengers. The fuel tanks were topped off and the plane departed CVH for San Diego Montgomery (MYF) around noon. The planned route was CVH FIM VPOCN MZB MYF. The flight started on the left fuel tank and switched to the right tank over the FIM VOR. Approaching MYF, I was instructed to enter a left downwind for 28L. Approximately 2 miles west of the field, I was instructed to extend downwind and follow traffic ahead. I performed the landing checklist and extended gear at midfield on the downwind. No change was made to the fuel selector since the right tank had more fuel than the left. The electrically operated auxiliary fuel pump remained off as per the placard "takeoff and land with the aux pump off". The engine behaved normally on downwind, base and the first part of final approach. I extended the last 10 degrees of flaps and slowed the aircraft to final approach speed approximately 1 mile from the runway.

Soon afterwards, the engine started running rough and lost power. My first instinct was that the engine was too rich, so I pulled the mixture lever out about 1 inch. The engine behavior did not change, so I set the mixture back to full rich and increased the throttle. The engine did not respond to this input either and continued to run rough with reduced power. I declared an emergency with MYF tower and was instructed to land 28L. I advised the tower I was going to try to land 28R since the displaced threshold area was closer. The aircraft was already at final approach speed, full flaps and gear down, so I did not attempt to change configuration or speed. It became obvious that we were not going to reach the hard surface.

At approximately 20 feet above ground I raised the nose to flare the aircraft and reduce airspeed to a minimum. The stall warning horn sounded just before ground contact. The nose gear immediately collapsed although I did not see what caused this. The aircraft ended up on the runway. The engine was still making some power so the propeller struck the runway several times before coming to a stop. The aircraft slid approximately 250 feet coming to rest in the displaced threshold area left of centerline. I pulled the mixture to idle, turned off the battery and alternator switches and evacuated the passengers.

Emergency personnel arrived in about 5 minutes and asked me to completely shut off the fuel and electrical systems. I reentered the aircraft and moved the fuel selector to off (requiring depressing a safety override) and double checked that the mixture was in idle cutoff and the battery and alternator switches were off.

Subject: Re: N1259M

Zoë,

Unfortunately there are no engine monitors on the airplane.

I estimated landing with 14 gallons usable in the left tank and 24 gallons usable in the right tank.
