Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Wings, wing struts, tail, elevators, propeller, motor, fuselage, doors, landing gear damaged to varying degrees. Obvious damage based on post crash photos.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The weather on the morning of the accident flight was clear skies and at least 10 sm visibility with little wind. The single occupant/pilot took off from Johnson Creek (3U2) to the north towards Yellow Pine and headed west along the East Fork of the South Fork of the Salmon River to the confluence of the South Fork of the Salmon River where the pilot flew south up river over Krassel USFS (24K) towards accident airport Reed Ranch (192).

The pilot overflew Reed Ranch on the upwind for runway 16 to inspect field conditions as is standard practice for back country air operations. Conditions observed during the overflight of Reed Ranch supported landing to the south on runway 16 and departing to the north down river on runway 34.

The accident aircraft flew past Reed Ranch approaching from the south after completing a turn northbound and entering a left downwind for runway 16 to left base and then to left final for runway 16. This is the procedure recommended by the Idaho Department of Aeronautics and by McCall Mountain Flying School, from whom the pilot had received multi day training in Idaho back country flying operations and a BFR in July 2023.

The accident aircraft was configured correctly for landing and the approach airspeed over the runway threshold was between 70-75 mph in accordance with the aircraft operating handbook guidance and training received. The stabilized approach supported proceeding to a landing on runway 16 rather than initiating the last available opportunity for a go around due to rising terrain and tall stands of trees located at the end of runway 16.

The aircraft unexpectedly continued to float in ground effect once past the runway 16 threshold and touched down past the midfield mark approximately 600-800 feet before the end of the runway 16. After touching down the pilot applied braking and full back elevator. During the attempt to bring the aircraft to a halt and at a speed of approximately 25-30 mph the pilot felt a powerful jolt, after which the tail rose abruptly and the nose lowered, the propeller and spinner contacted the ground and the accident aircraft flipped over onto it's back, coming to rest upside down close to the end of runway 16.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Not landing at Reed Ranch would have prevented the accident. The aircraft nosed over prior to the end of the landing strip after contacting a rock, hole or rut with the main gear. I believe the aircraft would have come to a complete stop within the bounds of the airstrip without that event. Reed Ranch is classified by ID Aviation Association as "Developed", suggesting it should be clear of significant obstacles & hazards on the runway surface. What constitutes clear of significant obstacles and hazards on the runway surface is of course open to some interpretation. Perhaps reclassifying Reed Ranch as less than developed would be helpful.
