NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Filed and provided instrument clearance from KEKA FOT ESI STS SGD KAPC, 7000 ft, departed 1027hrs PDT. Passed through fog layer from 800-1500ft. Climbing through 2300 as I contacted Seattle Ctr 124.85. Less than a minute from completing this communication, there was a change in the noise/vibration of the engine with slowly decreasing RPM. My engine monitoring equipment showed #6 CHT increasing. I declared emergency through Seattle Center very near the FOT VOR. Engine seized at about 2500'. I asked for a vector that seemed safest. Provided 050 degrees. Immediately turned R to 050. Before I completed this turn, I was back in IMC. Maintained best glide speed and heading 050. Popped through the fog bank about 700 feet, fortunately in an open area coastal marsh. Shut off fuel and electrical power. Picked out the smoothest spot in the marsh land and turned R to final heading. Anticipating the landing area to be soft, I slowed to near stall speed, touched down, bounced along, holding off my front wheel as long as I could.....eventually the nose gear dug in and the plane violently flipped 180 degrees end over end. Immediately my ELT and Phone went crazy. I was hanging upside down from my restraint mechanism, eventually able to get out of plane after kicking out a window. Spoke with 911, within 5-10 mins EMS responded. I was uninjured, cooperated with Law Enforcement, Fire, County, EMT and NTSB contacts. Eventually given a ride to rental car agency. Drove home to Napa

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The engine was only 20 hours after major overhaul. I was completely compliant with break-in recommendations by Teledyne Continental. The pre-flight preparation was uneventful. I don't know if there was anything I could have done to prevent the engine seizure. I stayed in control after engine failure and proceeded along suggested vector. With the fixed gear and soft ground, I think the flip-over was inevitable although very violent. I am very lucky and I intend to contact Seattle Center for their assistance in this matter

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Complete engine failure as described.....without fire.....complete seizure after slow loss of power and oil pressure.
