

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Independence State Airport, 7S5 State: Oregon

ZIP: 97361 Country: USA

Latitude: 44° 52' 0.59" N Longitude: 123° 11' 32.40" W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 06/25/2024 Local Time: 0750, PDST
mm/dd/yyyy

Time Zone: Pacific

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N806GK

Manufacturer: Kenneth Moles

Model: Rans S-19 Venterra

Serial Number: 110800050

Year of Manufacture: 2012

Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: Rans S-19

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1320 lbs

Weight at Time of Accident/Incident: 860 lbs

Number of Seats: 2 Flight Crew Seats: 0

Cabin Crew Seats: 1 Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop strike and broken, nose gear collapsed, engine support bent (it's part of the nose gear assembly), slight damage to wingtip on pilot's side (left), slight damage to tail light

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday, June 25, 2024, I arrived at the Independence State Airport (7S5) and my hangar to prepare for a flight at approximately 7:05 AM, PDST (Note: most times are estimates). I own N806GK, an Experimental airplane qualifying as a Light Sport, built by Ken Moles in 2012. I purchased it early this year. The airplane is a Rans S-19 Venterra, a tricycle, with a 100 HP Rotax ULS engine. As noted in my logbook, as a student pilot (Cert.# [REDACTED]), I had been approved for practice solo flying by my instructor on June 19, 2024. I had practiced solo on June 20, 21, and 24, doing landings/take-offs without incidents or concerns.

I followed my preflight check lists to confirm my airplane was safe for flight and started the engine at approximately 7:30 AM. The weather was clear, calm winds, and temp about 60 degree F. After warming the engine, conducting magneto checks, and visually confirming Runway 34 was clear, I announced my departure as "closed traffic pattern." I entered downwind, base, and final adding the fuel pump and flaps as required. My first landing was smooth, with a very small bump, so I announced a touch-and-go, and took off for my second landing practice.

As on my first landing, I was in the correct airport approach pattern, announcing my intentions. There was no other traffic in the pattern. On final, I was low, so I added power to reach the numbers and proceeded to land. Apparently, I didn't notice I was going slower than the desired 60-70 mph and my descent rate was too rapid. As I came down on the numbers, I expected ground effect to slow my drop, but it didn't. My airplane hit the runway hard and bounced high, perhaps six to eight feet. I did not control the bounce and the airplane porpoised up and down at least three times. On the last bounce, the front nose gear collapsed, dropping the nose to gravel, breaking one prop and stopped. The airplane had bounced to the west edge of the asphalt. I had stopped approximately 150 yards down the runway. No other planes were in the pattern. No property was damaged. No persons were injured.

I don't recall if the engine stopped on its own. A radio call came in to ask if I was OK, and I said I was. I immediately shut off all power and exited the airplane to survey the damage and to see if fuel was leaking. I was not injured. There was no evidence of fuel leakage. Eight or ten men arrived at the airplane in only one minute. We decided to move it off the runway, lifting the nose and rolled it back to my hangar, which was approximately 200 yards SE. There did not appear to be damage to the main gear.

At the hangar, my instructor arrived and I checked the ELT, though I don't recall clearly if the hard landing triggered it. I confirmed it was not activated. To be safe, I called the 800 number to report my ELT and gave them the information. They indicated they had not received an electronic alert from my ELT. That call was at 8:18 AM. I removed the top and bottom cowlings to look for damage and fuel or oil leaks. The engine appeared undamaged.

To the best of my recall, all this information is accurate.

David C. Pastor [REDACTED]

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

In hindsight and evaluating my accident, I did not confirm my landing speed was at 60-70 mph, the operating manual guidelines. I think I dropped below that speed and therefore had a very fast sink rate. The hard landing and bounce surprised me. I am not sure if I moved the stick forward to attempt to control the bounce, but may have. I have been advised that to avoid a repeat incident I should: 1) Most important, confirm that my speed is in acceptable ranges for landing. If not, apply power and abort the landing. Take a go-around. 2) If the airplane has a hard, unexpected landing and bounce I have two options- hold the stick firm (not moving forward or back) and ride out the bumps or, better, apply full power and abort the landing. I'm told the plane may have bounced lightly a 2nd time if I had done that, and then it would have remained airborne and allowed me to make a go-around.
