Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent left wing, left main gear bent inward, bent left elevator and horizontal stabilizer. No damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I entered the downwind for Runway 17 at Tocoma Narrow airport. The weather was VFR and the winds were variable. I set up for a normal approach for a 3 point landing. Just prior to touchdown I heard the stall warning, the aircraft touched down in a 3 point attitude, and then began to veer to the right. I attempted to maintain directional control with rudder, aileron and brakes, but was unable to and the aircraft departed the right side of the runway into the grass and ground looped. The left wing, elevator and horizontal stabilizer made contact with the ground. I taxied the aircraft to the ramp, although I didn't have sufficient braking authority from the right seat to make the turn and I had the passenger seated in the left seat apply brake pressure to make the 90 degree turns off of the runway and onto the taxi way.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I am not sure what caused the ground loop. The only thing I can think of might be that, instead of the winds being light and variable, which is what I thought I heard, they were actually variable and at an intensity that would have necessitated a wheel landing instead of a 3 point. In this case, the wheel landing would have provided better positive control on the ground while slowing the aircraft.
