NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Point of departure LGD at 11:23 Pacific. Fuel serviced at LGD. Destination S21. Destination terrain was a hard surface level runway. There was no wreckage distribution as the plane remained substantially damaged but intact.

Chronological order: I obtained updated (ADDS-B in) weather enroute and automated weather from Sunriver AWOS inbound from the east. Winds there were around 3 knots. Closer in I heard a report of wind 240 at 8 knots. I switched the radio to the Sunriver CTAF frequency and joined the pattern for Runway 18. Another aircraft landed on runway 18 before me. I completed a normal crosswind landing. On the rollout a huge gust exceeded the ability of full aileron and corresponding rudder to correct and the right wing continued to lift as the plane slid to the left and weathervaned clockwise into the gust causing the nose gear to collapse. The aircraft remained upright with the propeller and nose cone touching the runway. We were able to pull the tail down and tow the aircraft backwards off the runway to a tie down area using just the main landing gear. No injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident reoccurrence has already been prevented in aircraft manufactured after the Tri Pacer series. The tall, close together, tricycle gear on this series has been discontinued and a lower and wider stance gear is now on all Piper aircraft. The Tri Pacer series has been nicknamed "The Milk Stool" because it is prone to tipping over easily, like a three legged milk stool, even during a fast taxi turn.
