Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The left wing of the glider impacted a rock on the side of the dirt road upon landing and put a substantial gash in the wing. The section of the fuselage between the cockpit also struck a rock after being spun on the ground from the impact to the wing and also has a substantial gash in it.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I launched around 11:45. Released from tow about 5mi NE of the airport at about 7400' and climbed to 10,400'. At this point I glided east to Bismarck peak and arrived around 9500' and encountered sinking air so instead of turning around to fly back into the sinking air I flew south to mineral peak expecting to find lift where I usually do but the air was also sinking a lot and I arrived at roughly the peak height. I decided to head back west to the airport but found no lifting air and the headwind was significant at the lower altitude. At around 1000' agl over a dirt road I chose to commit to landing as I deemed it was the safest option since I could no longer see the airport. Circling over the dirt road I could tell there was a gradual incline so decided to approach it from the downhill side and land uphill. The air was turbulent near the ground but I managed to set up on final approach with plenty of road remaining. Once I touched down the wing hit some rocks and brush on the side of the road which was roughly 2ft higher than the center of the road. This spun the glider around to face the opposite direction of the final approach at which point the glider came to a stop.

On the ground I noticed strong gusts uphill but calm winds between gusts. It was also impossible to see the depth of the road and the higher sides from 1000ft above the ground while trying to identify hazards in the road. Ultimately, the left wing striking a rock on the side of the road that was raised caused the glider to spin 180 deg once on the ground and during the spin I think the fuselage struck the other side of the road.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

making the decision to head to the airport earlier, using bigger altitude margins
