Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Collapse nose gear and right main. damage to right wing from gear collapse. Damage tonose cowl. Unknown other damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The accident occurred on landing at Diamond Point Airport (2WA1) Sequim, Washington on August 10th at approximately 3PM. The flight originated at Bremerton National Airport (KPWT). The weather at the destination had been overcast in the morning, but clearing in early afternoon. On arrival, I observed that there was a cumulus layer at about 500-1000 feet obstructing the view of the normal approach. I decided to fly north over the bay and enter on a base leg allowing me to turn on final avoiding the cloud layer. However, after a 360 over the bay to the north, I was asked to delay for several departures. I then headed over the bay to the east to allow departing aircraft. I then began a straight in approach. On short final, we appeared to be too low so I added power. As we reached the runway the aircraft was subjected to a downdraft that slammed the plane into the end of the runway collapsing nose gear and right main. It then skidded a short distance on the runway and slid on the grass adjacent to the runway. I subsequently learned that such a downdraft was common at that airport.
