William Foote

ATP Certificate #2877540

2nd class medical exp 3/25

On 8/17/2024 approximately 1600 I was returning to Boise Idaho from Nampa Idaho KMAN.

I contacted Big Sky approach and notified them of my intention to land at KBOI. Big Sky assigned a transponder code and asked me to make best speed straight into 10L and handed me off to tower.

Tower cleared me to land 10L. My plane is equipped with a Garmin 750 gps. I configured the visual approach and slowed the plane down. On short final I was configured with full flaps, stabilized and setup for landing. The plane touched down in a tail low attitude and as I was slowing the plane suddenly veered right. I was able to apply power, right aileron and left rudder to try and correct. The plane continued turning right and started skipping. The plane came to rest on its nose with no damage to wings and tail. The damage appears to be around the left main gear. There were no mechanical anomalies.

Conditions were VFR with a quartering right gusty crosswind and hot. There were active dust devils in the area. I believe I encountered a dust devil or gust before I had the tail down resulting in a loss of directional control. I was alone in the aircraft and am current and proficient in this aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unsure of what I would do differently.
Maybe not fly in Hot gusty conditions. or tower
warning of observed dust devils.
