Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The full extent of the damage to the aircraft is to be determined as we have not been given permission to inspect until after the investigation is complete, however the initial observations are that the aircraft is beyond repair and / or completely totaled.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Delbert Boyd was piloting District aircraft N6633K the morning of the incident. The days initial departure was at 6:00 am PST from the Oroville Municipal Airport. From his departure, the flight plan scoped many areas for aerial application to rice fields for mosquito larva; including multiple fill-ups at agriculture airstrips. The final fill-up occurred at 9:35 am PST at the Bianchi Airstrip, about 1 mile NE of the town of Nelson, CA (Bianchi Airstrip - Lat: 39.56138824926987, Long: -121.74818448953174).

At 11:11 am PST, Mr. Boyd contacted the District office via his cell phone to report that he had crashed his aircraft in a rice field. The location of the crash was - Lat: 39.542716, Long: -121.659285, North of Nelson Ave., South of Cottonwood Rd., East of the Starkey rice silos off of highway 99, North West of Thermalito, CA. Mr. Boyd remained on the phone with District office until emergency personnel could arrive. Mr. Boyd was able to exit the aircraft under his own power and managed to walk out of the rice field and onto a rice road at which point emergency personnel arrived and began tending to his injuries. Mr. Boyd was eventually transported to a hospital.

At the time of the incident, Mr. Boyd stated that the crash was due to pilot error. Upon internal District investigation of the incident, his statement is believed to be factual. From what can be determined, while making applications to a rice field, Mr. Boyd was working in very close proximity to high tension transformer lines. The evidence suggests that while flying North during his application of a rice field, his right wing struck one of the high tension transformer lines. It appears that the top bi-wing detached from the aircraft and was at ground level of the high tension transformer lines, while the rest of the aircraft crashed just North of the high tension transformer lines.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Increase existing safety margins in direct proximity to high tension transformer lines.
