Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Damage to LH main landing gear and associated structure. Damage to underside of aircraft including puncture of fuselage from debris on the ground.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot Statement:

About 0330 in the morning I was called by Comm-Center(CC) asking if I could look at completing a Scene Call in the High Uintahs for a patient in the woods and that Summit SAR was still in the process or connecting with the patients party. I was told by CC that AirMed had turned this flight down due to smoke and visibility and that DPS did not want to respond at this time.

Conditions were some clouds in the sky, Zero moon illumination as the moon had set at approximately 2207hrs.

Receiving the initial details of the flight I reviewed the flight on ForeFlight, looked at fuel requirements and not knowing if I would need to search for their location elected to add fuel to ensure I had a loiter time if needed. I knew that minimum fuel to complete the flight from the scene area to IMED in Murrey, UT was 150kg which included my reserve.

The crew and I went to the aircraft, I completed my RA selecting Night Shift, Flight between 2-6 am, Unfamiliar destination and Technical flight. I added my fuel and added more than I had planned by mistake (due to I've never topped off the aircraft at Logan and when at IMED it is usually 410 when fuel is about to spill out the fuel port). I mentioned to the crew about the possibility of reduced visibility and that we would take it slow with that consideration and then we departed.

Enroute to the destination it was brought up in discussion why we were being called and I mentioned that AirMed had turned down for visibility (thought I had mentioned that before), DPS said that they would wait till sunrise. It was mentioned that the altitude of the LZ was approximately at 9300'. I noted the temperature @ 11* since we were cruising at 9300 and about 15 minutes out and then pulled up the HOGE chart noting that if all worked as planned I should be close to weight at arrival including the need to orbit while the SAR completed making contact. Then we had an LZ changed to Elizabeth Ridge at about 5 minutes out which was at apparently at 10,276'. Later I found out that the original LZ was passed by the Patient and his group as they were driving out which was an open meadow.

Upon arrival to the new LZ, we were in touch with the SAR team, overflew the LZ at about 300-400" at about 50-60 knots, the LZ was well lighted by the SAR teams vehicles so over all we had good visibility on it, winds were out of the west, visibility was 6+. I mentioned that for the second pass I would slow some more and lower to get a feel for the aircraft and a better view of the LZ which was for the most part a dirt road intersection open on both side with some smaller trees around and also surrounded by taller trees, we also started the before landing check at this time. I felt that although you could not do a shallow approach the area was big enough to land a couple of Blackhawks or say at least 340' L by 100' wide (probably wider) where the intersection was and I did not pickup on the fact that the road as it went west past the small intersection did curve to the right.

While doing the second pass we confirmed that the LZ was big enough, the hazards being the taller trees on the extreme edge of the 75' and approach path and at the forward end, the possibility of brown-out and it seemed the aircraft was handling ok, thinking back I do not remember noting the torque and being at 40 knots I would not have had a good read and was concentrating outside the aircraft due to the lack of moon. Utilizing the Mountain Training technique for a confined LZ seemed to me impractical at the time due to the trees and vehicles surrounding the LZ but there were others alternative to help decide this I did not utilize either.

On approach the SAR team shutdown their lights, we slowed the aircraft below 50 knots and then Troy opened his door to clear the aircraft.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Mid-Flight change of LZ (and landing site altitude) seems to be a contributing factor. Root cause analysis is ongoing and will be shared as details are finalized.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
