Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Both wings damaged (left>right); left strut bent; left elevator bent; vertical stabilizer and rudder bent; prop strike and flip with damage to spinner and upper engine cowl. No damage to other property.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

2 Cessna 180s departed KBDN at approx 1pm PST on 10/5/24 for Alvord Desert to camp for the night with friends that had driven there from Central Oregon. Arrived at lakebed and located group of car campers; landed uneventfully, taxied, parked, and unloaded camping gear from both airplanes. It was decided to take 2 (husband & wife) of the drive-in campers for scenic flight around the lakebed and down to Fields Station for milkshakes; the husband flew in other aircraft, while wife flew with me in front right seat. Preflight inspection and passenger briefing was performed, and we departed 2nd from the lakebed at approx 3pm PST. The flight took us southbound along the western slope of the Steens Mountains enroute to Fields Station (approx 15-20nm south of campsite). My aircraft arrived first and landed on the gravel strip .5 miles east of Fields Station. We got milkshakes and departed back for campsite on eastern flank of lakebed at approx 3:30pm PST. We landed 2nd approx 1.5 miles behind other aircraft, after flying standard left traffic pattern. There was minimal wind, unrestricted visibility, and firm landing surface (nothing that would make for a challenging landing event). Wheel landing was performed, and upon the main gear setting there was a sudden severe swerve to the right. I was unable to stop the tail from coming around, which side-loaded the left main gear causing the left wing to drag/contact the playa surface, and the airplane tail came up and caused subsequent prop strike and flip-over at very low energy. Power and fuel was turned off, and I exited the airplane through the pilot-side door. I then went around to passenger side, opened the door, and helped support the passenger as they released safety harness and rolled out the door. There were no injuries.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Upon retrospective analysis of the event - if there was nothing mechanical that would have caused the swerve - it seems likely that the passenger braced with her legs upon landing and got on the right brake. If this is indeed what happened - emphasizing more clearly/firmly the importance of keeping feet back from controls could likely have prevented the event.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown - perhaps gear, wheel, or brake could have caused right swerve
