Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Aircraft destroyed due to impact with rugged terrain during off airport landing. Tail section folded over, Nose gear torn off, Wings bent.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday Nov 16th I accepted a Flights for Life Mission for Sunday morning. I was to deliver 1 box destined for Tuba City, to the Flagstaff Airport.

On Sunday the 17th I arrived at the Phoenix / Deer Valley Municipal Airport (KDVT) before sunrise and completed a thorough pre-flight check.

At about 0715 I met with my passenger, a PPL student. I explained the plan for the day, and we then reviewed the W&B numbers, and the weather forecast for KFLG. The weather at Flagstaff was forecast as "Marginal" because there were a few clouds (less than 10% cloud coverage) between 1000' and 3000' AGL.

I went through the pre-flight check list, a second time, with him and then after that we called for the fuel truck to top off both fuel tanks as Deer Valley (our departure airport) would be our alternate if for any reason we could not land at Flagstaff.

After the fuel truck finished, we re-sumped the wing tanks. At around 815 we were ready to push back, but there was another aircraft 2837X behind us that was having trouble starting its engine. After our push back the engine was started without difficulty. During the Run-Up everything was performing within limits.

We were cleared for takeoff and departed DVT at approximately 0900. We turned to a direct Flagstaff heading and after leaving the class Delta for Deer Valley I contacted PHX Approach for flight following. We were issued a squawk Code and I then climbed to 8500' for the enroute altitude. I periodically adjusted the mixture control as we climbed to maintain best performance at just rich of peak.

After approx. 15 minutes we could see Sedona and decided to try and receive the ATIS at KFLG. We were able to receive the ATIS, but it was weak and staticky and difficult to interpret at that distance.

While trying to hear the ATIS I thought I heard the engine misfire. I looked at the engine gauges and the controls and all looked okay. Then it happened again and there was a definite drop in engine RPMs and performance. I immediately checked that the throttle control was pushed all the way forward, applied full rich mixture and carb heat. This had a positive effect and seemed to have corrected the problem. As I was thinking of possibly turning around and returning to Deer Valley when the engine began losing power and I was unable to hold altitude.

There were a few moments of disbelief and wondering what had happened so that I could fix it. Training kicked in and I pitched for best glide 70 Kts. I cycled through all of the engine controls to see if that would help but it did not. I made a turn to the West. We were flying on BOTH fuel tanks, so I switched to the LEFT tank for a few moments and then the RIGHT tank. Still no improvement. The ignition was running in the BOTH position, so I cycled through LEFT then RIGHT with no change, and then back to BOTH.

I had my passenger read the emergency check list for engine out. I had covered all the items.

Next, I had him enter "7700" on the transponder and hit IDENT. I keyed the mike at the same time and informed ABQ center that we were not making power and that we were descending to the west towards I-17. The controller pointed out that the closest airfield was 20 miles away, SkyRanch at Carefree. I told him that I was unable to make it that far. He requested souls on board and fuel which I gave him. I remembered "A-B-C-D" and started looking for a place to land. I pumped the throttle hoping to get some fuel to the engine with the

Narrative continued:

I remembered "A-B-C-U" and started looking for a place to land. I pumped the throttle hoping to get some fuel to the engine with the accelerator pump. That did not help. I even unlocked the primer and to used that to try and bring some life to the engine. That did not work either. This whole time I was also looking for a possible landing area. The terrain was uneven and covered in brush and small trees. There were some clearings, but they all looked to be too short and ending with a steep drop off into a ravine or arroyo. I could not see any roads other than the I-17 miles ahead of us. We were never going to make it that far, but I knew I was headed West and getting closer to help if we had to hike out. I was looking for a good clearing to land on, but I could not find one. We were getting very low now and I saw our only option was a small clearing passing beneath our left wing. I was probably 700' AGL at this point. I had the passenger unlatch his door in case we had a hard landing.

I did not have enough energy remaining, and therefore I ended up short of my intended landing zone. I was flying the plane on the edge of stalling until just before impact. At that point I pulled the yoke full aft in hopes of further reducing airspeed before impact. After impact I shut off the ignition & master switches, and the fuel selector. We climbed out of the plane through the right-side door. Once out of the airplane we could see that it was substantially damaged with the empennage folded over to the left side. There was a steady stream of fuel coming from the belly of the plane, so we moved a safe distance away to await help. I wanted to go back into the aircraft to collect my personal belongings, but my passenger would not let me do that as I had suffered a head injury and was bleeding profusely from my left ear.

I am very grateful that my passenger walked away from this accident alive and uninjured. I am also thankful for all the help I received from the ABQ center controller and the AZ DPS for arriving so quickly in the rescue helicopter. I think there was also a Mooney flying in the area at the time of the accident. I believe that this airplane altered their route and helped out by flying a circle high above us so that ABQ Center could pinpoint our location for enroute rescuers. I would like to thank that pilot as well if it is possible.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.
