Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

R16 / N516ER was struck by N126GX in the run-up area of 3R @KPRC on Sunday 17 November 2024 at 1510 local. The left wing of 26GX impacted the propeller of 16ER as 26GX was taxiing past 16ER.

The damage sustained to 16ER included both blades of the fixed pitch McCauley propeller MN 1A170E/JHA7660, which is damaged beyond repair and will require replacement. Engine S/N L-39261-51E will require removal, disassembly, inspection, reassembly due to the impact damage meeting the OEM damage of Prop Strike/Sudden Stoppage.

Estimated cost of repairs to 16ER is \$31,635.27, not including expenses related to loss of use

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On November 17, 2024 Instructor Togiai scheduled a private pilot, pre-solo flight with student Laws. The instructor authorized the activity at 14:01 MST, the student checked in for the flight at 14:10 MST, and ramped out the aircraft 14:30MST. The crew recieved taxi clearance to Runway 3R and positioned themselves in the 3R runup area for their pre-takeoff run-up/check. There were 3-4 other aircraft in the run-up area, some ERAU aircraft and some local aircraft. N126GX was taxiing in front of the other aircraft in the run-up area. The ERAU crew noted that the 26GX was stopped in front of other aircraft when they first saw them. The crew of ERU16 was running their run-up checklist with the parking brake set and holding brakes manually. The instructor looked up to scan and saw N126GX taxi as if they were trying to join the run-up area, and the instructor noted that their wing was clear of ERU16's prop until N126GX swung toward them and impacted the prop. The instructor and student both ducked their heads, and the instructor pulled the mixture knob to shut off the engine.

Instructor Statement: My student and I were in the run up area of Runway 03R along with 3-4 other A/C (some were also ERAU PRC A/C) when the A/C that hit us, N126GX, joined the run up area. N126GX was in front of some of the other A/C that were in the run up area, but they were stopped when I initially saw them. My student was completing our run up checklist and I was monitoring what he was doing. We had the parking brake set and were holding the brakes. I looked up to scan (as I would normally do) and seen N126GX taxiing forward in front of some of the other A/C that were in the run up to my right. They avoided the other A/C, but I decided to watch them move forward past us. They were clear of us to start and then all of a sudden I seen their left wing tip start to grow closer, but I didn't think it was going to be close enough to hit us. I looked back at our prop to verify if it was indeed going to hit our prop and by the time I confirmed it would and had looked back at the wing tip, it already made contact with our prop. My student and I immediately dropped our heads into our laps as debris was flying past us and making loud noises. I immediately grabbed the mixture and pulled it to idle cutoff and after that I pulled the throttle out to idle to try to get the prop from spinning. It all happened and ended in a matter of seconds. I sat up and looked out the front of the A/C and could see the other pilot stunned with what just happened. I looked to my right and seen all of the debris and seen another ERAU PRC A/C watching it all unfold (the other ERAU PRC A/C taxied past us and departed). After that I turned the magnetos off and pulled the keys out and set them on the glare shield. I also simultaneously called ground to report what had just happened and asked them to send the fire trucks to our location. I asked my student if he was okay and he said he felt fine and I did not sustain any physical injuries either. Ground asked us what had happened and I explained that N126GX had just taxied into us. From there I monitored the ground frequency and switched to Riddle Ops where I called them and told them they needed to send someone from safety or admin because we had just been hit by another A/C. The fire department showed up shortly after so I turned off the A/C master and standby and did the shutdown check before opening my window to talk to them. We sat there shortly talking and then I called the Director of Safety, Mik Quesenberry then we waited and then I eventually asked the firefighters if I could exit the A/C to take pictures.

Student Statement: I was looking at the MFD, there was a plane smaller than us approaching, but appeared to be not in radius. As I was about to finish the Run Up checklist our prop struck the approaching wing. I heard a fan like buzzing noise, I immediately ducked and just heard what happened did not see.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
