Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 12/10/2024, Instructor Pilot (IP) and Student Pilot (SP) departed our base of operations (58CA) for a training flight at Los Alamitos AAF (KSLI). While en route, crew members obtained current ATIS information which indicated clear skies and wind 050 at 4kts, gusting to 20+ knots.

At approximately 1210hrs SP was at the controls of the aircraft in a standard traffic pattern for runway 4R. ATC cleared us for a full length approach to the departure end of runway 4R (concrete portion) and advised wind 050 at 4kts, gusting to 17kts. After acknowledging the landing clearance, IP activated the HYD TEST switch to simulate a hydraulic failure. SP reacted by slowing the aircraft to under 60KIAS, and in accordance with published emergency procedure, activated the hydraulic cutoff switch on the collective head. SP then initiated a shallow approach to the aforementioned runway for a planned running landing.

As the SP brought the aircraft to 3-5ft AGL, IP observed a groundspeed indication of 27kts and decreasing. SP initiated a running landing and continued to control the aircraft on the runway.

Soon after touchdown, the aircraft began to drift during its ground run toward taxiway alpha at the edge of the runway. In order to maintain aircraft directional control and avoid drifting onto the taxiway, IP applied right cyclic pressure. This caused the aircraft to feel light on the skids and subsequently become airborne. Once the aircraft became airborne IP stated "my controls" and began to attempt to control the aircraft and land. IP struggled to control the helicopter in a hover. After approximately 3-4 seconds, helicopter began to yaw to the left uncontrollably and impacted the ground.

After impacting the ground IP shut off engine by pulling FFCL, emergency fuel cutoff, and rotorbrake levers fully aft. Crew self-extricated and made verbal notifications to KSLI tower personnel whom dispatched fire/rescue services.
