light Incident Report –

December 21, 2024 On December 21, 2024, at approximately 2:00 PM, I, Armando Orozco, occupied the left seat of a 2006 Remo G3 600 aircraft. This plane, which I had recently begun the process of purchasing from its registered owner, had undergone its annual inspection the prior weekend. Joining me in the right seat was Jim Webb, a certified flight instructor (CFI). The purpose of the flight was familiarization, marking our second flight together that weekend; we had flown for about an hour the previous day, practicing landings at airports such as Imperial and Brawley.

Pre-Flight Preparations

Prior to takeoff, I checked all fluids were at optimal. I reviewed the weather conditions using ForeFlight on my electronic device. The wind was reported as light and variable, with a ceiling of 12,000 feet and 10 miles of visibility. The aircraft was fueled with 20 gallons of fuel. After taxiing to the run-up area, I performed a standard run-up check. All systems operated normally, and the engine monitor system indicated the aircraft was ready for flight.

Flight Summary

We departed from runway 26 and flew to the north, just northwest of Calipatria, before deciding to head south for landing practice at Calexico Municipal Airport. After completing two touch-and-go landings on runway 26, we proceeded north to Imperial Airport. Prior to landing at Imperial, I checked the weather via the airport's ATIS system. We performed two touch-and-go landings on runway 32, with one go-around due to a high approach angle. Afterward, we decided to fly to Brawley Airport to conclude the day.

Incident Details

As we approached Brawley Airport, I observed a crop duster departing from runway 8. To accommodate its flight path, I executed a 360° teardrop maneuver in the northwest portion of the airport and entered the traffic pattern at the standard altitude of 1,000 feet at midfield. I was instructed to reduced engine power to idle as I was in the habit of being too high in the pattern, trimmed the plane, and deployed 15° of flaps. The aircraft began a controlled descent at a rate of approximately 300 feet per minute. Upon turning to base and then final approach, I extended the flaps to full (40°) at approximately 400 feet AGL.

The aircraft was descending steadily at about 68 mph and aligned with the runway numbers. However, as we crossed the threshold, the plane unexpectedly dropped sharply and impacted the asphalt. The aircraft bounced into the air and veered left, colliding with a taxiway marker and a windsock pole. This caused the plane to spin 180° and slide backward before coming to a stop.

Post-Incident Actions

After the aircraft came to rest, I immediately shut down all systems and flipped the trim and flap switches. I confirmed with the instructor +
