Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Airplanes nosed over damaging the prop and spinner, wing struts, wind screen, rutter, and vertical stabilizer

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

January 5, 2025 at 9:30 am--Local biologist and myself departed Dillon, MT Airport to do deer surveys. There were low hanging clouds and it was hazy with visibility between 3 and 10 miles. We started our survey at the top of the mountain range doing transects lines at about half mile apart and working our way down the mountain. When doing this, I slow the plane down to about 65 miles per hour by reducing the throttle. With atmospheric conditions as they were that day I was getting carb ice but clearing it with intermediate carb heat. We found another group of deer and made three turns around them but on the last circle when I tried to throttle up to clear the ridge the airplane just wouldn't climb like expected and I was forced to land on the ridge. Nobody was hurt and not damage to the plane but due to the snow and sagebrush I could not safely take off again. The next day several people help clear snow and sagebrush to make a runway. I then attempted to take off by going down the ridge but got the right main wheel off the side of the cleared area and in the deeper snow. That pulled me off into some deep sagebrush and caused the plane to nose over onto its top. The terrain was variable steep hillsides with some flatter ridge tops with 10-12 inches of snow at patches of sagebrush about 2 feet tall. After my forced landing the previous day local search and rescue was notified and they came and picked up me and the biologist. Our intent was to return to the Dillon Airport when we finished the deer survey.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I should have been using the carb head more generously and should not approach perpendicular to a ridge that I'm going to cross but instead cross at about a 45 degree angle to the ridge. Had I done that, I would have been able to turn towards lower terrain.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
