Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Around 14:00 I did pre-flight inspection of the aircraft at Lodi airport 103: both fuel tanks were full, engine oil was at about 6.5 quarts. Checked the weather on my Ipad in Foreflight. Foreflight suggested runway 17 for landing. Studied satellite map to familiarize myself with new airport and set O22 as my destination point in Foreflight. Started the engine. Performed runup, everything performed normal. Entered radio frequency for Columbia airport on the second radio channel, made departure radio call on 103 frequency and around 14:30 we took off from runway 26. At about 700ft made departing radio call and continued climbing. At about 1000-1500ft tuned east and continued to climb to about 3500ft. After leaving Lodi airspace, switched to O22 frequency and started listening for traffic calls at Columbia. Flight continued to be normal. At about 10 miles prior made a radio call: "Columbia traffic, Cessna 79910 10 miles to the west, will be entering at 45 for runway 17. At about 5-6 miles prior to the airport made one more radio call: "Columbia traffic, Cessna 79910 about 5 miles to the west, will be entering at 45 for runway 17" and started looking for the airport. After getting airport insight, pulled carburetor heat and started my decent. When coming up on the entry to 45 as indicated in Foreflight, made another radio call: "Columbia traffic, Cessna 79910 entering at 45 for downwind runway 17". The other pilot in the pattern asked how far out I was, my foreflight showed 2.5 miles and I said we are about 2.5 miles out. The other pilot said something like: "good now we know where to look for you". I had traffic in sight. Made my downwind call, there was one aircraft landing, checked fuel selector valve, it was on both, checked carb heat, it was on, checked mixture, it was reach. Made my base, call, the aircraft in the pattern just landed. Made my final call, there was an aircraft on the taxi was. I felt like I was high on final and did a forward slip with left rudder and right aileron. Was flying over the runway, but did not feel like I had enough runway to make a safe landing. Pushed in carb head and power and made a call: "Columbia traffic, Cessna is going around." Airplane started to climb and suddenly RPMs started to drop, and it felt like the engine was choking. I double checked my controls: fuel selector valve was on both, carb heat was on, I pushed mixture, it was reach, I pulled out throttle and pushed it back in, it seemed like the engine had started back up, but after a few moments it started choking again. I made a radio call: "Mayday! Mayday! I'm having engine out", pulled the throttle out and pushed it back in. engine started back up and then choked again. As I was doing that, I was looking for a possible landing spot but could not find anything suitable. I managed to make a 180 degree turn and head back to the airport by pulling throttle out and pushing it back in. I looked at the radio panel and saw my radios being off. I remember my airspeed being about 65mph as I was heading North back to the airport. I kept working the throttle as we were headed for the trees directly in front. Engine died completely, pushing the throttle didn't do anything, we hit the trees with the landing gear and the plane went nose down and to the left into the ground.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine and radios went out
