- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft left wing - severe damage to left fiberglass wingtip, damage to outer portion of wing, dent in distal portion of wing
 Aircraft right wing - scrape to bottom of right fiberglass wingtip, damage to outer portion of wing, dent in distal portion of wing
 Scrapes to left and right propeller blades. Damage to propeller nose cone - tip of cone is missing.
 Damage to hanger #41 - scrapes and dent to hanger door. Damage to hanger #42 - propeller sliced into door, aircraft nose cone tip embedded in hanger door.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On February 9, 2025, I was preparing for a flight to Lodi California (103). I completed my preflight of the aircraft and pulled the aircraft out of the hanger and onto the movement area between the hangers. At approximately 10:50 PST I advanced the throttle to full to prime the engine. After priming the engine, I started the engine with the intent to taxi to the self-service fuel depot to get fuel for the flight. I neglected to retard the throttle prior to engine start, resulting in the engine running at full throttle after ignition. The aircraft then began to taxi forward. I attempted to apply the brakes but that did not stop the aircraft (I do not believe I pressed on the toe brakes). I then attempted to retard the throttle to idle but initially had trouble pulling the throttle back. I was eventually able to pull the throttle back to idle but by that time the aircraft veered to the left such that the left wingtip struck and scraped down the door of hanger #41, further increasing the pull of the aircraft to the left. The prop then struck door of hanger #42 becoming lodged in the hanger door causing the aircraft to spin dramatically to the left, stopping the movement of the aircraft. At this point I shut the aircraft engine down and the passenger and I exited the aircraft. Upon inspection of the aircraft, I noted damage to the left wing and wingtip, the right wing and wingtip, and the propeller and nose cone. I rotated the prop to the right to dislodge the prop and remove the aircraft from the hanger door (note: the nose cone remained lodged in the door of hanger #42).

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

There were several steps that could have been taken to prevent this accident: 1) Apply the parking brake prior to engine start 2) Refer to printed checklist prior to engine start 3) Ensure feet are on the toe brakes prior to engine start. Also, during the preflight inspection of the aircraft I had a concern that the aircraft may have leaked fuel after my last flight. I spent some time investigating this and ultimately determined that there had not been a fuel leak, but I suspect this issue may have caused me to be distracted when I started the engine.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours

_____ Cycles

Time Since This Part Inspected/Overhauled
