Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right landing gear broken. Both wing tips damaged. Wing mounts to fuselage bent. Fuselage dented. Windshield broken. Both yokes bent in cockpit. Cockpit dash bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At about 9:00AM on 2/09/2025 I did a routine inspection of the airplane, and read fuel gauges as being full tanks, which was what I expected, as I had topped off the tanks about four weeks previously. I departed Indian Hills Airpark, (2AZ1), and flew about four miles to the south to practice landings. I did four landings, and flew north about 15 miles, climbing to 5500 feet indicated by the altimeter. I twice circled above Harcuvar Peak, then flew south, descending to 2800 feet, and entered a left downwind in a pattern to land runway 26 back at Indian Hills.

I descended normally on my down wind leg, and turned left base for 26. As I made that turn, my engine faltered, and stopped. I thought I must have some carburetor icing, so I pulled carb heat all the way out, and got a 1-2 second burst of power, after which the engine stopped completely. I turned final toward a dirt road, short of but parallel to the runway. At the east end of the dirt road was a low tree, about 25 feet high, and I failed to clear that tree with my wheels. The tree deflected the airplane to the left, and the left wingtip hit a steel post about 12 feet high, twisted the aircraft about 90 degrees from direction of travel before it landed. Upon landing, the right landing gear was broken off as the airplane hit the ground and came to a stop. The airplane came to rest with the left wing in the air, and the right wingtip on the ground. I left the airplane through the right door.

After the crash, the left wing tank measured no fuel, and the right wing tank was very low. It was obvious the engine was starved of fuel, and that I had misread the gauges before takeoff, assuming full tanks.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

A more careful check of available fuel would have prevented engine loss and this crash.
