Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Upper wing struts bent with small cracks in the primary flight control surface. Fuselage had a 3 inch crack on side. Landing strut bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On February 21, 2025 MK30 drone SN 178650100U was conducting a flight under a SAC-EC and Experimental Authority from Prime Air's Pendleton, OR flight test facility. Weather at the time was within operational limits. The drone was flying an engineering flight test point to intentionally induce a Safe Contingent Land (SCL) during vertical ascent after a delivery, with an obstacle (cart) placed in the intended delivery and landing area.

The drone took off at 10:30am local Pacific time, transited to the flight test delivery location, and successfully descended and delivered a package nominally. While the drone was hovering at the delivery location, a commercial off-the-shelf (COTS) drone piloted by a Prime Air flight test employee was flown intentionally into position vertically above the MK30. The MK30 drone climbed briefly, detected the COTS drone in the climb path, and enacted a Safe Contingent Land (SCL), as expected. While descending the MK30 clipped the obstacle in the delivery/landing area, then came to a stop on the ground near the obstacle. After coming to a stop on the ground, the drone performed an unplanned ascent vertically to approximately 15 meters above-ground-level (AGL). The drone stopped ascent, starting an oscillating descent, and came to rest on the ground inverted.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The accident was a result of a software defect being discovered during a flight test activity on the Pendleton UAS Test Range. Changes will be tested and incorporated into the next release of software to correct the defect.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
