☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

There was no damage to anything other than N7792A. Damage includes: prop strike (bent propeller), dented spinner, dented cowling, substantial damage to RH wing tip, strut, flap, fuselage above RH rear window, deformed skin below window and on roof above cockpit indicating probable bulkhead damage as well as rear carry-through spar damage. Rear RH window was broken out. Damage also to RH door (wedged shut from lowered flap).

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

02-21-2025 1300 PST. Weather CAVU Waterville Muni Airport, WA 2S5

We departed Cashmere, WA Airport (8S2) at approx 12:00 to practice crosswind landings at Waterville, WA (2S5). It's a short flight at about 4500', 19nm.

Waterville Airport owned by Chelan-Douglas Regional Port Authority (CDRPA), Wenatchee, WA 98801

Wind at the airport was 160 magnetic at approximately 6-7 knots indicated by wind sock inflation atop the largest building at the populated end of the runway which lies 07/25 degrees magnetic—perfect for crosswind landing/takeoff practice. We were the only aircraft in the traffic pattern. We entered the pattern and began practicing landing and takeoff procedures. The neutral wind direction invited landing on 25, taxi to end, turnaround and takeoff on 07; then land on 07, taxi to end and takeoff on 25. On our 3rd or 4th landing Zack maneuvered for alignment on runway 25. He approached the landing in a controlled and stabilized approach at 75 mph, touched down power idle at 65 mph and began the landing rollout on the left-of-centerline upwind side of the runway. I mentioned moving toward center. Suddenly the left main landing gear entered residual snow/slush at the base of the three foot high snow berm left by the runway plow. The snow/slush caused the aircraft to swerve violently to the left. We smashed into the berm, bent the propeller, sudden-stopped the engine and dipped the right wing into the berm or the runway, breaking off the wingtip and coming to rest nose down, tail high in the air. We shut down all electrical switches and exited via the pilot's door. The right side door would not open due to interference from the right wing skin dropping down to seal off the door. There were no injuries.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

This accident could have been prevented by applying right rudder sooner to get the aircraft back to centerline, practicing landings at an airport with a wider runway, or an airport with less snow piled up along the edges.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
