Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Rotor blades, propeller blades, tail sheared off, both doors (hinges/window), cracked front windscreen, cracked Garmin G5. The engine hasn't been evaluated yet (waiting for insurance adjuster).

No damage to property

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was on a solo cross country flight to complete my student solo cross country requirement hours. The cross country plan was KCNO (Chino) to F70 to KAJ0 (Corona) and back to KCNO. I left KCNO at ~12:30pm. When I was ~7 miles from F70, I listened to F70's AWOs, adjusted my altimeter. I also radioed French Valley traffic my location and intention to cross midfield. When I was ~1 mile I radioed my intention of crossing midfield at 500 feet above light aircraft traffic pattern, and then crossed midfield. As I crossed midfield another aircraft radioed intention of crossing midfield, and he asked me to clarify my position, which I did. I radioed my intention of entering downwind, and I entered downwind left traffic pattern at ~2350 MSL (light aircraft height) for runway 18. As I was on downwind I heard on French Valley traffic short final, saw aircraft off my shoulder, checked the Garmin G3X for any additional aircraft on base and final, and did not see any. I radioed my intention of left base, made left base, and then saw a second aircraft on final directly at 90 degrees in front of me. Slowed my speed, giving aircraft room to land, and turned on final after aircraft had landed. I slowed further (slow vertical descent) to allow the aircraft to exit runway or to takeoff. I perceived the aircraft was going to exit runway at first taxiway, however, the aircraft did not exit, and I waited a few more seconds for the aircraft to exit runway and then realized I was too low and my airspeed was too slow. I was unable to recover my airspeed with full throttle and turned aircraft to the right to the grassy area just north of the runway, avoiding the road (Auld Rd) and traffic on the road. I crashed outside the airport approximately 250 feet, 012 degrees in line with runway 18, at approximately 1:02pm.

I crashed onto a grassy area with rocks/small boulders without damage to the area. The aircraft landed on the left side. I released my harness, turned off the engine, climbed out the open right door. The tail had sheared off, and landed ~50 feet away.

Emergency services was on seen within 3 minutes.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I lost situational awareness of my airspeed and altitude waiting for the landed aircraft to exit the runway. A few moments prior I thought I should go around, but the aircraft looked like it was going to exit the first taxiway, but it did not, and by the time I realized the aircraft was not exiting, my airspeed was too slow, and I was unable to recover.

I should have gone around the moment I thought I should, and not lose sight/focus of my instruments.
