Left wingtip/aileron damage. Left vertical stabilizer damage. Left wheel scraped.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Don is pursuing a Commercial certificate. Don was flying as PIC and Lou was acting as Flight Instructor, for Don to practice Commercial ACS maneuvers. The flight originated at KPAO at about 10:50 am local time, with some air work nearby just north of the PAO delta, and then returned to PAO for some pattern work, and then to KSQL, at approximately 11:50am.

When we listened to the ATIS at SQL prior to entering the Delta airspace, Lou recorded this ATIS: SQL info Z, wind 160@11, vis 10, (missed temp/dewpoint), altimeter 29.99, landing runway 12.

After entering downwind, the tower reported wind (from memory) of 220/10 kts, but did not report any gust factor. Lou requested a soft-field landing, followed by a touch-and-go. On final, the windsock showed about 12 knots of wind from the right, nearly perpendicular to runway 13. There were some gusts noticeable on short final. Touch down was on the centerline and straight. We rolled out for no more than a couple seconds when the plane yawed abruptly to the right. At this point, Lou also gave input on the controls, but the right wing began to lift as the plane turned right, and even with full aileron deflection to the right and full right rudder, then plane continued swerving right and the left wing contacted the runway. The plane stopped on the runway, after having turned about 80 degrees to the right. We were able to taxi clear of the runway, and shut down to assess the damage.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

React faster with rudder/aileron inputs when in gusty conditions.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
