Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left and Right wing tip damage, Right main gear tore out of gear box, tail wheel damaged, prop strike, lower cowling damage, fuselage damage at location of main gear attach points, tailcone damage, damage behind pilot's door area.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed from 01CL at approximately 09:45 on 4/19/25. Received automated weather information from KPVF (128.125). Winds were reported to be 6 knots from 160. I communicated on CTAF that I would be landing runway 23. I entered the pattern on a left downwind for 23. As I was abeam the numbers I noticed the Windsock was showing winds were approximately 9 knots from 160. I continued my landing and upon rollout, the aircraft started turning to the left due to the cross wind. I was unable to counter the effects of the wind. The airplane continued to the South and impacted a berm just before an embankment. The Right main gear separated from the aircraft and I experienced a violent jolt as the passenger door opened and I believe it was at this time that the prop strike occurred. The aircraft continued down the embankment nose first. As the aircraft started to come to a stop, the tail of the aircraft swung to the south, down the embankment, and the aircraft continued to slide until it came to rest on top of a drainage ditch. I secured the aircraft and exited through the Pilot door to survey the scene and determine the safety level of remaining in the area to assess the damage. There was no concern for my safety at that time.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This accident could have been prevented by having more instruction in crosswind conditions AND/OR choosing not to land at that airport during those crosswind conditions.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
 (If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
